

All Classes and Interfaces

[All Classes and Interfaces](#)

[Interfaces](#)

[Classes](#)

[Enum Classes](#)

[Record Classes](#)

Class

Description

AnimationWrapper

Animation wrapper class for our projects animations that get used.

Application

The entry point of the application.

DefinitionController

Controller for definition popup

DefinitionPopup

Represents Definition window called when a word is played

DictionaryDAO

The SQLite Dictionary.

EmptyTileSlotController

Empty Tile controller for EmptyTile view.

EmptyTileSlotModel

An empty tile slot model.

FXMLLoader

FXML Loader wrapper class for the project to load the game screen FXML pages.

GameMusicPlayer

Plays the game music track on repeat.

GameScenes

Game Scenes enum.

GameScreenController

Game screen controller that has some startup on screen thing todo.

GameScreenController.SidebarLoaded

GameScreenModel

Game Screen Model.

GameSoundPlayer

plays an audio clip as a sound effect for the game.

InfiniteFloatingAnimation

Balatro style floating tile animation.

LetterTileController

Controls the layout of the letterUIModel.

LetterTileGroupController

tile group that observes an observable list and updates the ui Tile Controller's nodes into their EmptyTileSlotController nodes.

LetterTileModel

Represents the letter tiles the player plays holds, redraws.

LevelController

Controller for the level screen.

LevelModel

Represents the level model.

LevelScoreSequence

Animates each level tile popping up and the score text increasing for every tile in the word row.

Logger

com.example.project.services.Logger for Application and to show up in test and build CI workflow.

LoginController

Controller for the login scene.

LoginModel

Login model class.

MainMenuController

controller for the main menu.

MainMenuModel

main menu model class

PageLoader

Interface for page loading.

PasswordHasher

Hashes passwords.

Popup

Parent class for popup windows

PopupController<P>

Parent class for PopupControllers

PopupLoader

class to load the popup and initialize it with a controller

RootLayoutController

Root layout that remains the root scene of the application to switch scenes within.

SceneManager

Represents the scene manager class.

ScoreChimePlayer

plays a note from the F major scale ascending in pitch each time for a nice score combo sound.

ScoreTimeline

Class for total score counter animation

ScrabbleTileProvider

Static class to store the scrabble base letter value.

ScrabbleTileProvider.ScrabbleTileData**Session**

Game Session.

ShopController

Shop view controller.

ShopModel

Shop Model.

SidebarController

The sidebar on shop and level with the current round info.

SQLiteConnection

Abstract SQLiteConnection class.

SQLiteDictionaryConnection

Connection to the dictionary.db

SQLiteUsersConnection

Connection to the users.db

SVGIcons

a static class to hold some icons for the application.

TextEmphasisAnimation

An animation to quickly enlarge text and then return it to its original scale.

TileController<T>

Parent class of TileControllers.

TileControllerFactory

class to load the tile model controller for that tile model type.

TileGroupController<modelType,controllerType>

Tile Group abstract class holds a row or column of tiles.

TileModel

Parent tile class for objects in the scene that are tiles.

UpgradeEffects

upgrade effect methods

UpgradeTileController

Controls the upgrade tile view fxml file.

UpgradeTileGroupController

tile group that observes an observable list and updates the ui nodes for some game tiles.

UpgradeTileModel

Represents the upgrade tiles sold at the shop.

UpgradeTileModel.UpgradeBuilder

builder class for the upgrades

UpgradeTiles

Static class to store all the possible upgrade tiles available in the game.

User

Represents a user in the application that can log in.

UsersDAO

SQLite Users database.

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

String ↗

getAbilityImagePath()

gets upgrade tile image path.

double

getCost()

gets the cost

String ↗

getDescription()

gets the description.

String

getFXMLPath()

gets the fxml path.

String

getName()

gets the name.

Runnable

getUpgradeEffect()

gets the effect for this tile.

Methods inherited from class com.example.project.models.tiles.TileModel

getClackSoundPlayer, getHoverSoundPlayer

Methods inherited from class java.lang.Object

clone[✉], equals[✉], finalize[✉], getClass[✉], hashCode[✉], notify[✉], notifyAll[✉], toString[✉], wait[✉], wait[✉], wait[✉]

Constructor Details

UpgradeTileModel

public UpgradeTileModel(UpgradeTileModel.UpgradeBuilder builder)

public upgrade constructor.

Parameters:

builder - upgrade builder

Method Details

getName

public String getName()

gets the name.

Returns:

return name.

getDescription

public String getDescription()

gets the description.

Returns:

description.

getCost

public double getCost()

gets the cost

Returns:

return cost.

getAbilityImagePath

```
public String✉ getAbilityImagePath()
```

gets upgrade tile image path.

Returns:

returns loaded Image for this tile.

getUpgradeEffect

```
public Runnable✉ getUpgradeEffect()
```

gets the effect for this tile.

Returns:

returns the runnable effect for this tile.

getFXMLPath

```
public String✉ getFXMLPath()
```

Description copied from class: [TileModel](#)

gets the fxml path.

Specified by:

[getFXMLPath](#) in class [TileModel](#)

Returns:

string path.

Uses of Class com.example.project.models.tiles.EmptyTileSlotModel

Packages that use EmptyTileSlotModel

Package

Description

com.example.project.controllers.tileViewControllers

com.example.project.services

Uses of EmptyTileSlotModel in com.example.project.controllers.tileViewControllers

Methods in com.example.project.controllers.tileViewControllers with parameters of type EmptyTileSlotModel

Modifier and Type

Method

Description

void

`EmptyTileSlotController.bind(EmptyTileSlotModel modelToUse)`

Uses of EmptyTileSlotModel in com.example.project.services

Methods in com.example.project.services with parameters of type EmptyTileSlotModel

Modifier and Type

Method

Description

`EmptyTileSlotController`

`TileControllerFactory.createEmptyTileController(EmptyTileSlotModel emptyTile)`

Uses of Class com.example.project.models.tiles.LetterTileModel

Packages that use LetterTileModel

Package

Description

com.example.project.controllers.TileGroups

com.example.project.controllers.tileViewControllers

com.example.project.models.gameScreens

com.example.project.models.tiles

com.example.project.services

Uses of LetterTileModel in com.example.project.controllers.TileGroups

Constructor parameters in com.example.project.controllers.TileGroups with type arguments of type LetterTileMode

Modifier

Constructor

Description

```
LetterTileGroupController(int number0fEmptyTileSlots, javafx.scene.layout.Pane container,  
javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList, Consumer<  
<LetterTileController> onClickAction)
```

Constructor

```
LetterTileGroupController(int number0fEmptyTileSlots, javafx.scene.layout.Pane container,  
javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList, Consumer<  
<LetterTileController> onClickHandler, List<Runnable> afterSyncActions)
```

Constructor

Uses of LetterTileModel in com.example.project.controllers.tileViewControllers

Methods in com.example.project.controllers.tileViewControllers that return LetterTileModel

Modifier and Type

Method

Description

LetterTileModel

LetterTileController.getModel()

Methods in com.example.project.controllers.tileViewControllers with parameters of type LetterTileModel

Modifier and Type

Method

Description

void

```
LetterTileController.bind(LetterTileModel tile)
```

Uses of LetterTileModel in com.example.project.models.gameScreens

Methods in com.example.project.models.gameScreens that return types with arguments of type LetterTileModel

Modifier and Type

Method

Description

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>

LevelModel.getRedrawWindowTilesProperty()

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>

LevelModel.getTileRackTilesProperty()

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>

LevelModel.getWordWindowTilesProperty()

Methods in com.example.project.models.gameScreens with parameters of type LetterTileModel

Modifier and Type

Method

Description

protected void

LevelModel.addTileToRack(LetterTileModel tile)

protected void

LevelModel.addTileToRedrawWindow(LetterTileModel tile)

protected void

LevelModel.addTileToWordWindow(LetterTileModel tile)

void

LevelModel.addToCombo(LetterTileModel tile)

add combo sum and multiCombo

boolean

LevelModel.tryMoveTile(LetterTileModel tile)

determines where tile should go and moves it

Uses of LetterTileModel in com.example.project.models.tiles

Methods in com.example.project.models.tiles that return types with arguments of type LetterTileModel

Modifier and Type

Method

Description

javafx.beans.property.SimpleObjectProperty<LetterTileModel>

EmptyTileSlotModel.getLetterTileSlotProperty()

Methods in com.example.project.models.tiles with parameters of type LetterTileModel

Modifier and Type

Method

Description

void

`EmptyTileSlotModel.setTile(LetterTileModel tile)`

Set a new tile.

Uses of LetterTileModel in com.example.project.services

Methods in com.example.project.services with parameters of type LetterTileModel

Modifier and Type

Method

Description

`LetterTileController`

`TileControllerFactory.createLetterTileController(LetterTileModel lt)`

Uses of Record Class

com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData

Uses of Class com.example.project.models.tiles.TileModel

Packages that use TileModel

Package

Description

com.example.project.controllers.TileGroups

com.example.project.controllers.tileViewControllers

com.example.project.models.tiles

com.example.project.services

Uses of TileModel in com.example.project.controllers.TileGroups

Classes in com.example.project.controllers.TileGroups with type parameters of type TileModel

Modifier and Type

Class

Description

class

`TileGroupController<modelType extends TileModel, controllerType extends TileController<modelType>>`

Tile Group abstract class holds a row or column of tiles.

Uses of TileModel in com.example.project.controllers.tileViewControllers

Classes in com.example.project.controllers.tileViewControllers with type parameters of type TileModel

Modifier and Type

Class

Description

class

`TileController<T extends TileModel>`

Parent class of TileControllers.

Fields in com.example.project.controllers.tileViewControllers declared as TileModel

Modifier and Type

Field

Description

protected `T`

`TileController.model`

Uses of TileModel in com.example.project.models.tiles

Subclasses of TileModel in com.example.project.models.tiles

Modifier and Type

Class

Description

class

EmptyTileSlotModel

An empty tile slot model.

class

LetterTileModel

Represents the letter tiles the player plays holds, redraws.

class

UpgradeTileModel

Represents the upgrade tiles sold at the shop.

Uses of TileModel in com.example.project.services

Methods in com.example.project.services with type parameters of type TileModel

Modifier and Type

Method

Description

<C extends TileController<T>, T extends TileModel>

C

TileControllerFactory.createTileController(T tile, Class<?> controllerType)

Returns controller of type.

Uses of Class **com.example.project.models.tiles.UpgradeEffects**

No usage of com.example.project.models.tiles.UpgradeEffects

Copyright © 2025. All rights reserved.

Uses of Class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder

Packages that use UpgradeTileModel.UpgradeBuilder

Package

Description

com.example.project.models.tiles

Uses of UpgradeTileModel.UpgradeBuilder in com.example.project.models.tiles

Methods in com.example.project.models.tiles that return UpgradeTileModel.UpgradeBuilder

Modifier and Type

Method

Description

UpgradeTileModel.UpgradeBuilder

UpgradeTileModel.UpgradeBuilder.cost(double cost)

upgrade cost builder

UpgradeTileModel.UpgradeBuilder

UpgradeTileModel.UpgradeBuilder.description(String[✉] description)

upgrade description builder

UpgradeTileModel.UpgradeBuilder

UpgradeTileModel.UpgradeBuilder.imagePath(String[✉] imagePath)

upgrade image path builder

UpgradeTileModel.UpgradeBuilder

UpgradeTileModel.UpgradeBuilder.name(String[✉] name)

upgrade name builder

UpgradeTileModel.UpgradeBuilder

UpgradeTileModel.UpgradeBuilder.upgradeEffect(Runnable[✉] upgradeEffect)

upgrade effect builder

Constructors in com.example.project.models.tiles with parameters of type UpgradeTileModel.UpgradeBuilder

Modifier

Constructor

Description

UpgradeTileModel(UpgradeTileModel.UpgradeBuilder builder)

public upgrade constructor.

Uses of Class com.example.project.models.tiles.UpgradeTileModel

Packages that use UpgradeTileModel

Package

Description

com.example.project.controllers.TileGroups

com.example.project.controllers.tileViewControllers

com.example.project.models.gameScreens

com.example.project.models.tiles

com.example.project.services

com.example.project.services.shopItems

Uses of UpgradeTileModel in com.example.project.controllers.TileGroups

Constructor parameters in com.example.project.controllers.TileGroups with type arguments of type UpgradeTileModel

Modifier

Constructor

Description

`UpgradeTileGroupController(javafx.scene.layout.Pane container,
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList)`

Constructor with no additional sync action parameter.

`UpgradeTileGroupController(javafx.scene.layout.Pane container,
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList, Consumer<
<UpgradeTileController>> afterSyncActions)`

Constructor.

Uses of UpgradeTileModel in com.example.project.controllers.tileViewControllers

Methods in com.example.project.controllers.tileViewControllers with parameters of type UpgradeTileModel

Modifier and Type

Method

Description

void

`UpgradeTileController.bind(UpgradeTileModel tileModel)`

Uses of UpgradeTileModel in com.example.project.models.gameScreens

Methods in com.example.project.models.gameScreens that return types with arguments of type UpgradeTileModel

Modifier and Type

Method**Description**

`javafx.beans.property.ListProperty<UpgradeTileModel>`

ShopModel.currentShopItemsProperty()

Current items in the shop row that you can buy.

`javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel>`

ShopModel.playersUpgradesProperty()

get what upgrades the player currently has.

Methods in com.example.project.models.gameScreens with parameters of type UpgradeTileModel**Modifier and Type****Method****Description**

boolean

ShopModel.canPurchase(UpgradeTileModel tile)

Determines whether the player can afford to purchase the specified upgrade tile.

void

ShopModel.purchase(UpgradeTileModel tileClickedOn)

This should attempt to purchase an upgrade tile from the shop.

Uses of UpgradeTileModel in com.example.project.models.tiles**Methods in com.example.project.models.tiles that return UpgradeTileModel****Modifier and Type****Method****Description**

`UpgradeTileModel`

UpgradeTileModel.UpgradeBuilder.build()

build upgrade

Uses of UpgradeTileModel in com.example.project.services**Methods in com.example.project.services that return types with arguments of type UpgradeTileModel****Modifier and Type****Method****Description**

`javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel>`

Session.getUpgradeTilesProperty()

gets upgrade tile property

Methods in com.example.project.services with parameters of type UpgradeTileModel**Modifier and Type****Method****Description**

void

Session.addUpgrade(UpgradeTileModel upgrade)

Adds an upgrade tile to the player's collection.

`UpgradeTileController`

`TileControllerFactory.createUpgradeTileController(UpgradeTileModel upgradeTile)`

Constructor parameters in `com.example.project.services` with type arguments of type `UpgradeTileModel`

Modifier

Constructor

Description

protected

`Session(int newHandSize, int newWordViewSize, int newRedrawWindowSize,
javafx.collections.ObservableList<UpgradeTileModel> newUpgrades, User newUser, int newMoney,
int newLevelsBeaten, int currentLevelRequirement, int newFirstLevelsRequirement, int newInitialMoney)`

Constructor for injecting values in for unit test.

Uses of `UpgradeTileModel` in `com.example.project.services.shopItems`

Methods in `com.example.project.services.shopItems` that return `UpgradeTileModel`

Modifier and Type

Method

Description

static `UpgradeTileModel`

`UpgradeTiles.getRandomUpgradeTile()`

Gets random upgrade tile.

static `UpgradeTileModel`

`UpgradeTiles.getTile(int index)`

Gets the upgrade tile at index.

Constructor Details

FXMLPageLoader

```
public FXMLPageLoader()
constructor.
```

Method Details

load

```
public javafx.scene.Parent load(String2 fxmlPath)
```

```
throws IOException
```

Description copied from interface: PageLoader

Load method to load fxml page.

Specified by:

[load](#) in interface [PageLoader](#)

Parameters:

fxmlPath - path to .fxml mfile.

Returns:

returns the fxml file root node.

Throws:

[IOException](#) - exception on failing.

getController

```
public <T> T getController()
```

Description copied from interface: PageLoader

Get the .fxml pages controller

Specified by:

[getController](#) in interface [PageLoader](#)

Type Parameters:

T - controller type.

Returns:

page's controller.

LOGIN

`public static final GameScenes LOGIN`

Login Screen.

MAINMENU

`public static final GameScenes MAINMENU`

Main Menu Screen.

LEVEL

`public static final GameScenes LEVEL`

level Screen

SHOP

`public static final GameScenes SHOP`

Shop screen.

Method Details

values

`public static GameScenes[] values()`

Returns an array containing the constants of this enum class, in the order they are declared.

Returns:

an array containing the constants of this enum class, in the order they are declared

valueOf

`public static GameScenes valueOf(String name)`

Returns the enum constant of this class with the specified name. The string must match *exactly* an identifier used to declare an enum constant in this class. (Extraneous whitespace characters are not permitted.)

Parameters:

`name` - the name of the enum constant to be returned.

Returns:

the enum constant with the specified name

Throws:

`IllegalArgumentException` - if this enum class has no constant with the specified name

`NullPointerException` - if the argument is null

Module com.example.project

Class Logger

java.lang.Object[✉]
 com.example.project.services.Logger

```
public class Logger  
extends Object✉
```

com.example.project.services.Logger for Application and to show up in test and build CI workflow.

Constructor Summary

Constructors

Constructor

Description

`Logger()`

Default constructor writes to console does not capture.

`Logger(ByteArrayOutputStream✉ mockCapturedErrorLog, ByteArrayOutputStream✉ mockCapturedStdOutLog)`

Constructor for unit tests.

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

void

`clearLogs()`

Clears captured logs use in tests teardown.

`String✉`

`getErrorLogs()`

`String✉`

`getLogs()`

void

`logError(String✉ message)`

Logs an error message to standard error.

void

`logMessage(String✉ formattedMessage)`

Log message to System.out.

void

`setPrintToConsole(boolean value)`

Methods inherited from class java.lang.Object[✉]

`clone✉, equals✉, finalize✉, getClass✉, hashCode✉, notify✉, notifyAll✉, toString✉, wait✉, wait✉, wait✉`

Constructor Details

Logger

```
public Logger()
```

Default constructor writes to console does not capture. For the project files. Use below for unit tests.

Logger

```
public Logger(ByteArrayOutputStream2 mockCapturedErrorLog,  
              ByteArrayOutputStream2 mockCapturedStdOutLog)
```

Constructor for unit tests. Logger with constructor to input the byte array output stream to write to. (for mocking a log to check get methods.)

Parameters:

mockCapturedErrorLog - byte array to store error logs.

mockCapturedStdOutLog - byte array to store standard output logs.

Method Details

setPrintToConsole

```
public void setPrintToConsole(boolean value)
```

Parameters:

value - if this logger will also print to the console.

getErrorLogs

```
public String2 getErrorLogs()
```

Returns:

Gets the error log messages.

getLogs

```
public String2 getLogs()
```

Returns:

returns the standard log messages.

logError

```
public void logError(String2 message)
```

Logs an error message to standard error. And adds a newline.

The message can include format specifiers like in `String.format(String, Object...)`.

Parameters:

message - the error message format string (e.g., "Failed to connect to %s")

clearLogs

```
public void clearLogs()
```

Clears captured logs use in tests teardown.

logMessage

```
public void logMessage(String2 formattedMessage)
```

Log message to System.out.

Parameters:

formattedMessage - message.

Module com.example.project
Package com.example.project.services

Interface PageLoader

All Known Implementing Classes:

FXMLPageLoader

public interface PageLoader

Interface for page loading.

Method Summary

[All Methods](#) [Instance Methods](#) [Abstract Methods](#)

Modifier and Type

Method

Description

<T> T

getController()

Get the .fxml pages controller

javafx.scene.Parent

load(String[✉] fxmlPath)

Load method to load fxml page.

Method Details

load

```
javafx.scene.Parent load(String✉ fxmlPath)
    throws IOException
```

Load method to load fxml page.

Parameters:

fxmlPath - path to .fxml mfile.

Returns:

returns the fxml file root node.

Throws:

IOException[✉] - exception on failing.

getController

<T> T getController()

Get the .fxml pages controller

Type Parameters:

T - controller type.

Returns:

page's controller.

Module com.example.project
Package com.example.project.services

Class PasswordHasher

java.lang.Object
 com.example.project.services.PasswordHasher

```
public class PasswordHasher  
extends Object
```

Hashes passwords.

Constructor Summary

Constructors

Modifier

Constructor

Description

PasswordEncoder()

public constructor.

protected

PasswordHasher(Logger logger)

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

boolean

doesPasswordMatch(String candidate, String hashed)

Verifies a candidate password against a hashed password.

String

hashPassword(String rawPassword)

Hashes a raw password using BCrypt.

Methods inherited from class java.lang.Object

clone(), equals(), finalize(), getClass(), hashCode(), notify(), notifyAll(), toString(), wait(), wait(), wait()

Constructor Details

PasswordEncoder

```
public PasswordHasher()
```

public constructor.

PasswordEncoder

```
protected PasswordHasher(Logger logger)
```

Method Details

hashPassword

```
public String2 hashPassword(String2 rawPassword)
```

Hashes a raw password using BCrypt.

Parameters:

rawPassword - the plain text password

Returns:

the hashed password string

doesPasswordMatch

```
public boolean doesPasswordMatch(String2 candidate,  
                                String2 hashed)
```

Verifies a candidate password against a hashed password.

Parameters:

candidate - the plain text password entered by the user

hashed - the hashed password stored in the database

Returns:

true if the password matches, false otherwise

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Constructor Details

PopupLoader

```
public PopupLoader()
```

Method Details

createDefinitionPopup

```
public static DefinitionController createDefinitionPopup(DefinitionPopup pup)
```

Parameters:

pup - popup model

Returns:

returns definition popup controller

Module com.example.project
Package com.example.project.services

Class SVGIcons

java.lang.Object
com.example.project.services.SVGIcons

```
public class SVGIcons  
extends Object
```

a static class to hold some icons for the application.

Constructor Summary

Constructors

Constructor

Description

SVGIcons()

Method Summary

All Methods

Static Methods

Concrete Methods

Modifier and Type

Method

Description

static javafx.scene.shape.SVGPath

getCogIcon()

gets a cog icon.

Methods inherited from class java.lang.Object

clone(), equals(), finalize(), getClass(), hashCode(), notify(), notifyAll(), toString(), wait(), wait(), wait()

Constructor Details

SVGIcons

```
public SVGIcons()
```

Method Details

getCogIcon

```
public static javafx.scene.shape.SVGPath getCogIcon()
```

gets a cog icon.

Returns:

icon SVG.

Module com.example.project
Package com.example.project.services

Class SceneManager

java.lang.Object[↳]
 com.example.project.services.SceneManager

```
public class SceneManager  
extends Object↳
```

Represents the scene manager class.

Constructor Summary

Constructors

Modifier

Constructor

Description

SceneManager(SceneManager newInstance)

Constructor to inject an instance.

protected

SceneManager(SceneManager newInstance, RootLayoutController newRootController, Map<GameScenes, GameScreenController> controllersToUse, Map<GameScenes, javafx.scene.Parent> pagesToUse)

Constructor with injection for tests

Method Summary

All Methods

Static Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

static SceneManager

getInstance()

void

initialise(RootLayoutController theRootController, PageLoader loader)

loads the fxml of all the scenes on launch to switch to via scene manaager.

void

switchScene(GameScenes type)

Switch between scenes specifiy scene type of type from GameScenes.

Methods inherited from class java.lang.Object[↳]

clone[↳], equals[↳], finalize[↳], getClass[↳], hashCode[↳], notify[↳], notifyAll[↳], toString[↳], wait[↳], wait[↳], wait[↳]

Constructor Details

SceneManager

public SceneManager(SceneManager newInstance)

Constructor to inject an instance.

Parameters:

newInstance - new instance.

SceneManager

```
protected SceneManager(SceneManager newInstance,  
                      RootLayoutController newRootController,  
                      Map<GameScenes, GameScreenController> controllersToUse,  
                      Map<GameScenes, javafx.scene.Parent> pagesToUse)
```

Constructor with injection for tests

Parameters:

newInstance - instance

newRootController - root controller

controllersToUse - controllers

pagesToUse - pages

Method Details

getInstance

```
public static SceneManager getInstance()
```

Returns:

Gets the programs Scene Manager instance.

initialise

```
public void initialise(RootLayoutController theRootController,  
                      PageLoader loader)
```

loads the fxml of all the scenes on launch to switch to via scene manager.

Parameters:

theRootController - the root Controller for the rootLayout scene.

loader - FXMLLoader

switchScene

```
public void switchScene(GameScenes type)
```

Switch between scenes specify scene type of type from GameScenes.

Parameters:

type - scene.

Module com.example.project
Package com.example.project.services

Class Session

java.lang.Object[↳]
 com.example.project.services.Session

```
public class Session  
extends Object↳
```

Game Session. holds info of the current session.

Constructor Summary

Constructors

Modifier

Constructor

Description

Session()

Default constructor.

protected

**Session(int newHandSize, int newWordViewSize, int newRedrawWindowSize,
javafx.collections.ObservableList<UpgradeTileModel> newUpgrades, User newUser, int newMoney,
int newLevelsBeaten, int currentLevelRequirement, int newFirstLevelsRequirement, int newInitialMoney)**

Constructor for injecting values in for unit test.

Method Summary

All Methods

Static Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

void

addUpgrade(UpgradeTileModel upgrade)

Adds an upgrade tile to the player's collection.

javafx.beans.property.ReadOnlyIntegerWrapper

getCurrentPlays()

gets the current plays.

javafx.beans.property.ReadOnlyIntegerWrapper

getCurrentRedraws()

gets the redraws property.

int

getHandSize()

gets hand size.

static Session

getInstance()

Gets session.

LevelModel

getLevelModel()

```
javafx.beans.property.ReadOnlyIntegerWrapper  
getLevelRequirement()
```

```
protected int  
getLevelsBeaten()
```

```
javafx.beans.property.IntegerProperty  
getMoneyProperty()
```

Returns the read-only money property for binding to UI components.

Integer²

```
getRedrawWindowSize()
```

gets redraw window size (number of slots)

```
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel>
```

```
getUpgradeTilesProperty()
```

gets upgrade tile property

int

```
getWordWindowSize()
```

gets word size.

void

```
resetGame()
```

Resets the current session when you lose

void

```
resetPlaysRedraws()
```

Reset the plays and redraws.

void

```
setLevelModel(LevelModel levelModel)
```

sets the session's level model

void

```
setUser(User newUser)
```

set new user.

boolean

```
spendMoney(int amount)
```

This attempts to spend the specified amount of money from the player's account.

void

```
updateLevelInfo()
```

Increments how many points are required to beat the level.

Methods inherited from class `java.lang.Object`²

```
clone2, equals2, finalize2, getClass2, hashCode2, notify2, notifyAll2, toString2, wait2, wait2, wait2
```

Constructor Details

Session

```
protected Session(int newHandSize,
                 int newWordViewSize,
                 int newRedrawWindowSize,
                 javafx.collections.ObservableList<UpgradeTileModel> newUpgrades,
                 User newUser,
                 int newMoney,
                 int newLevelsBeaten,
                 int currentLevelRequirement,
                 int newFirstLevelsRequirement,
                 int newInitialMoney)
```

Constructor for injecting values in for unit test.

Parameters:

newHandSize - hand size.

newWordViewSize - word length allowed.

newRedrawWindowSize - redraw window size.

newUpgrades - upgrade tiles.

newUser - user.

newMoney - money.

newLevelsBeaten - levels beaten.

currentLevelRequirement - current level requirement.

newFirstLevelsRequirement - first level requirement.

Session

```
public Session()
```

Default constructor.

Method Details

getInstance

```
public static Session getInstance()
```

Gets session.

Returns:

session instance.

getLevelRequirement

```
public javafx.beans.property.ReadOnlyIntegerWrapper getLevelRequirement()
```

Returns:

points required for the play to score at least to beat the level.

getLevelsBeaten

```
protected int getLevelsBeaten()
```

setLevelModel

```
public void setLevelModel(LevelModel levelModel)
```

sets the session's level model

Parameters:

levelModel - the current level model

getLevelModel

```
public LevelModel getLevelModel()
```

Returns:

the current level model

getMoneyProperty

```
public javafx.beans.property.IntegerProperty getMoneyProperty()
```

Returns the read-only money property for binding to UI components. This allows UI elements to automatically update when the players money changes.

Returns:

ReadOnlyIntegerProperty representing the player's current money amount

addUpgrade

```
public void addUpgrade(UpgradeTileModel upgrade)
```

Adds an upgrade tile to the player's collection. This will automatically update all UI displays bound to the upgrades property.

Parameters:

upgrade - this upgrades the tile to add it to the players collection

spendMoney

```
public boolean spendMoney(int amount)
```

This attempts to spend the specified amount of money from the player's account. This operation should only succeed if the player has enough money.

Parameters:

amount - the amount of money to spend (cannot be negative)

Returns:

true if the transaction was successful (player had enough money), false if the player is a broke

Throws:

[IllegalArgumentException](#) - if the amount is negative

setUser

```
public void setUser(User newUser)
```

set new user.

Parameters:

newUser - user that logged in.

getHandSize

```
public int getHandSize()
```

gets hand size.

Returns:

returns number of tiles allowed in hand.

getWordWindowSize

```
public int getWordWindowSize()
```

gets word size.

Returns:

return int word size.

getUpgradeTilesProperty

```
public javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> getUpgradeTilesProperty()
```

gets upgrade tile property

Returns:

upgrade tiles model list

updateLevelInfo

```
public void updateLevelInfo()
```

Increments how many points are required to beat the level.

resetGame

```
public void resetGame()
```

Resets the current session when you lose

getRedrawWindowSize

```
public Integer2 getRedrawWindowSize()
```

gets redraw window size (number of slots)

Returns:

return int redraw window size.

getCurrentPlays

```
public javafx.beans.property.ReadOnlyIntegerWrapper getCurrentPlays()
```

gets the current plays.

Returns:

current plays remaining.

getCurrentRedraws

```
public javafx.beans.property.ReadOnlyIntegerWrapper getCurrentRedraws()
```

gets the redraws property.

Returns:

the current redraws.

resetPlaysRedraws

```
public void resetPlaysRedraws()
```

Reset the plays and redraws.

Module com.example.project

Package com.example.project.services

Class TileControllerFactory

java.lang.Object
com.example.project.services.TileControllerFactory

```
public class TileControllerFactory  
extends Object
```

class to load the tile model controller for that tile model type.

Constructor Summary

Constructors

Modifier

Constructor

Description

`TileControllerFactory()`

Creates instance of `TileControllerFactory`.

protected

`TileControllerFactory(FXMLLoader loader)`

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

`EmptyTileSlotController`

`createEmptyTileController(EmptyTileSlotModel emptyTile)`

`LetterTileController`

`createLetterTileController(LetterTileModel lt)`

`<C extends TileController<T>, T extends TileModel>`
`C`

`createTileController(T tile, Class<?> controllerType)`

Returns controller of type.

`UpgradeTileController`

`createUpgradeTileController(UpgradeTileModel upgradeTile)`

Methods inherited from class java.lang.Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Constructor Details

TileControllerFactory

```
public TileControllerFactory()
```

Creates instance of `TileControllerFactory`.

TileControllerFactory

```
protected TileControllerFactory(FXMLLoader loader)
```

Method Details

createUpgradeTileController

```
public UpgradeTileController createUpgradeTileController(UpgradeTileModel upgradeTile)
```

Parameters:

upgradeTile - upgrade tile model.

Returns:

new upgrade tile controller.

createTileController

```
public <C extends TileController<T>,
      T extends TileModel>
C createTileController(T tile,
                      Class<?> controllerType)
```

Returns controller of type.

Type Parameters:

C - controller type.

T - tile type.

Parameters:

tile - tile model.

controllerType - controller type.

Returns:

return controller.

createLetterTileController

```
public LetterTileController createLetterTileController(LetterTileModel lt)
```

Parameters:

lt - letter tile model.

Returns:

returns letter tile controller.

createEmptyTileController

```
public EmptyTileSlotController createEmptyTileController(EmptyTileSlotModel emptyTile)
```

Parameters:

emptyTile - empty tile model.

Returns:

returns empty tile controller.

Uses of Class com.example.project.services.FXMLPageLoader

UpgradeTiles

```
public UpgradeTiles()
```

Method Details

getRandomUpgradeTile

```
public static UpgradeTileModel getRandomUpgradeTile()
```

Gets random upgrade tile.

Returns:

returns upgrade tile.

getTile

```
public static UpgradeTileModel getTile(int index)
```

Gets the upgrade tile at index.

Parameters:

index - tile to get.

Returns:

an upgrade tile model.

Package com.example.project.controllers.gameScreens

Record Class GameScreenController.SidebarLoaded

java.lang.Object[✉]
 java.lang.Record[✉]
 com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded

Enclosing class:

GameScreenController

```
protected static record GameScreenController.SidebarLoaded(javafx.scene.Parent node,  
SidebarController controller)  
extends Record✉
```

Constructor Summary

Constructors

Modifier

Constructor

Description

protected

SidebarLoaded(javafx.scene.Parent node, SidebarController controller)

Creates an instance of a SidebarLoaded record class.

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

SidebarController

controller()

Returns the value of the controller record component.

final boolean

equals(Object[✉] o)

Indicates whether some other object is "equal to" this one.

final int

hashCode()

Returns a hash code value for this object.

javafx.scene.Parent

node()

Returns the value of the node record component.

final String[✉]

toString()

Returns a string representation of this record class.

Methods inherited from class java.lang.Object[✉]

clone[✉], finalize[✉], getClass[✉], hashCode[✉], notify[✉], notifyAll[✉], wait[✉], wait[✉], wait[✉]

Constructor Details

SidebarLoaded

```
protected SidebarLoaded(javafx.scene.Parent node,  
                      SidebarController controller)
```

Creates an instance of a SidebarLoaded record class.

Parameters:

node - the value for the node record component

controller - the value for the controller record component

Method Details

toString

```
public final String toString()
```

Returns a string representation of this record class. The representation contains the name of the class, followed by the name and value of each of the record components.

Specified by:

[toString](#) in class [Record](#)

Returns:

a string representation of this object

hashCode

```
public final int hashCode()
```

Returns a hash code value for this object. The value is derived from the hash code of each of the record components.

Specified by:

[hashCode](#) in class [Record](#)

Returns:

a hash code value for this object

equals

```
public final boolean equals(Object o)
```

Indicates whether some other object is "equal to" this one. The objects are equal if the other object is of the same class and if all the record components are equal. All components in this record class are compared with [Objects::equals\(Object, Object\)](#).

Specified by:

[equals](#) in class [Record](#)

Parameters:

o - the object with which to compare

Returns:

true if this object is the same as the o argument; false otherwise.

node

```
public javafx.scene.Parent node()
```

Returns the value of the node record component.

Returns:

the value of the node record component

controller

```
public SidebarController controller()
```

Returns the value of the controller record component.

Returns:

the value of the controller record component

isWordInDictionary(String² wordToCheck)

gets if word is in dictionary.

Methods inherited from class java.lang.Object²

clone², equals², finalize², getClass², hashCode², notify², notifyAll², toString², wait², wait², wait²

Constructor Details

DictionaryDAO

```
public DictionaryDAO()
```

Constructor for this class SQLLiteDictionary.

DictionaryDAO

```
public DictionaryDAO(Connection2 connection,  
                      Logger logger)
```

constructor with injection for tests.

Parameters:

connection - mock connection.

logger - a mock logger.

Method Details

getWordDefinition

```
public String2 getWordDefinition(String2 wordToFind)
```

gets the words definition.

Parameters:

wordToFind - Word to get definition of.

Returns:

Returns the definition.

isWordInDictionary

```
public boolean isWordInDictionary(String2 wordToCheck)
```

gets if word is in dictionary.

Parameters:

wordToCheck - Word to check.

Returns:

returns the boolean value indicating whether the word exists in our database.

Module com.example.project
Package com.example.project.services.sqlite.dAOs

Class UsersDAO

java.lang.Object
 com.example.project.services.sqlite.dAOs.UsersDAO

```
public class UsersDAO  
extends Object
```

SQLite Users database. with a table `users` 2 columns. 'username', 'password'. Which are both defined as unique not null Strings in sqlite.

Constructor Summary

Constructors

Modifier

Constructor

Description

UsersDAO()

Constructor for this class SQLLiteDictionary.

addUser(User user)

Adds user to the user.db.

boolean

doesUserExist(String username)

User

getUser(String username)

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait

Constructor Details

UsersDAO

```
public UsersDAO()
```

Constructor for this class SQLiteDictionary.

UsersDAO

```
protected UsersDAO(PasswordHasher hasher,  
                  Connection✉ connection,  
                  Logger logger)
```

UsersDAO

```
public UsersDAO(Connection✉ connection,  
                  Logger logger)
```

Constructor with injection for unit tests.

Parameters:

connection - Connection

logger - logger.

Method Details

addUser

```
public void addUser(User user)
```

Adds user to the user.db. password will be hashed before storing to ensure greater security (no plain text passwords)

Parameters:

user - user to add.

doesUserExist

```
public boolean doesUserExist(String✉ username)
```

Parameters:

username - username

Returns:

returns bool indicating whether use is in database already.

getUser

```
public User getUser(String✉ username)
```

Parameters:

username - username.

Returns:

returns user with matching username.

JavaDoc Help

- Navigation:
 - Search
- Kinds of Pages:
 - Module
 - Package
 - Class or Interface
 - Other Files
 - Use
 - Tree (Class Hierarchy)
 - Constant Field Values
 - All Packages
 - All Classes and Interfaces
 - Index

Navigation

Starting from the [Overview](#) page, you can browse the documentation using the links in each page, and in the navigation bar at the top of each page. The [Index](#) and [Search](#) box allow you to navigate to specific declarations and summary pages, including: [All Packages](#), [All Classes and Interfaces](#)

Search

You can search for definitions of modules, packages, types, fields, methods, system properties and other terms defined in the API. These items can be searched using part or all of the name, optionally using "camelCase" abbreviations, or multiple search terms separated by whitespace. Some examples:

- "j.l.obj" matches "java.lang.Object"
- "InpStr" matches "java.io.InputStream"
- "math exact long" matches "java.lang.Math.absExact(long)"

Refer to the [Javadoc Search Specification](#) for a full description of search features.

Kinds of Pages

The following sections describe the different kinds of pages in this collection.

Module

Each module has a page that contains a list of its packages, dependencies on other modules, and services, with a summary for each. These pages may contain the following categories:

- Packages
- Modules
- Services

Package

Each package has a page that contains a list of its classes and interfaces, with a summary for each. These pages may contain the following categories:

- Interfaces
- Classes
- Enum Classes
- Exception Classes
- Annotation Interfaces

Class or Interface

Each class, interface, nested class and nested interface has its own separate page. Each of these pages has three sections consisting of a declaration and description, member summary tables, and detailed member descriptions. Entries in each of these sections are omitted if they are empty or not applicable.

- Class Inheritance Diagram
- Direct Subclasses
- All Known Subinterfaces
- All Known Implementing Classes
- Class or Interface Declaration
- Class or Interface Description
- Nested Class Summary
- Enum Constant Summary
- Field Summary
- Property Summary
- Constructor Summary
- Method Summary
- Required Element Summary
- Optional Element Summary
- Enum Constant Details
- Field Details
- Property Details
- Constructor Details
- Method Details
- Element Details

Note: Annotation interfaces have required and optional elements, but not methods. Only enum classes have enum constants. The components of a record class are displayed as part of the declaration of the record class. Properties are a feature of JavaFX.

The summary entries are alphabetical, while the detailed descriptions are in the order they appear in the source code. This preserves the logical groupings established by the programmer.

Other Files

Packages and modules may contain pages with additional information related to the declarations nearby.

Use

Each documented package, class and interface has its own Use page. This page describes what packages, classes, methods, constructors and fields use any part of the given class or package. Given a class or interface A, its Use page includes subclasses of A, fields declared as A, methods that return A, and methods and constructors with parameters of type A. You can access this page by first going to the package, class or interface, then clicking on the USE link in the navigation bar.

Tree (Class Hierarchy)

There is a [Class Hierarchy](#) page for all packages, plus a hierarchy for each package. Each hierarchy page contains a list of classes and a list of interfaces. Classes are organized by inheritance structure starting with `java.lang.Object`. Interfaces do not inherit from `java.lang.Object`.

- When viewing the Overview page, clicking on TREE displays the hierarchy for all packages.
- When viewing a particular package, class or interface page, clicking on TREE displays the hierarchy for only that package.

Constant Field Values

The [Constant Field Values](#) page lists the static final fields and their values.

All Packages

The [All Packages](#) page contains an alphabetic index of all packages contained in the documentation.

All Classes and Interfaces

The [All Classes and Interfaces](#) page contains an alphabetic index of all classes and interfaces contained in the documentation, including annotation interfaces, enum classes, and record classes.

Index

The [Index](#) contains an alphabetic index of all classes, interfaces, constructors, methods, and fields in the documentation, as well as summary pages such as [All Packages](#), [All Classes and Interfaces](#).

This help file applies to API documentation generated by the standard doclet.

Index

A B C D E F G H I L M N O P R S T U V W

All Classes and Interfaces | All Packages | Constant Field Values

A

addTileToRack(LetterTileModel) - Method in class com.example.project.models.gameScreens.LevelModel

addTileToRedrawWindow(LetterTileModel) - Method in class com.example.project.models.gameScreens.LevelModel

addTileToWordWindow(LetterTileModel) - Method in class com.example.project.models.gameScreens.LevelModel

addToCombo(LetterTileModel) - Method in class com.example.project.models.gameScreens.LevelModel

 add combo sum and multiCombo

addUpgrade(UpgradeTileModel) - Method in class com.example.project.services.Session

 Adds an upgrade tile to the player's collection.

addUser(User) - Method in class com.example.project.services.sqlite.dAOs.UsersDAO

 Adds user to the user.db.

animateTotalScore(int, int, Label, long) - Method in class com.example.project.controllers.gameScreens.animations.ScoreTimeline

AnimationWrapper - Class in com.example.project.controllers.gameScreens.animations

 Animation wrapper class for our projects animations that get used.

AnimationWrapper() - Constructor for class com.example.project.controllers.gameScreens.animations.AnimationWrapper

Application - Class in com.example.project

 The entry point of the application.

Application() - Constructor for class com.example.project.Application

apply(Node, double) - Method in class com.example.project.controllers.gameScreens.animations.InfiniteFloatingAnimation

 apply to node.

B

bind(EmptyTileSlotModel) - Method in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

bind(LetterTileModel) - Method in class com.example.project.controllers.tileViewControllers.LetterTileController

bind(UpgradeTileModel) - Method in class com.example.project.controllers.tileViewControllers.UpgradeTileController

bind(T) - Method in class com.example.project.controllers.tileViewControllers.TileController

 Binds tile to the controller as its model.

bindPersistentInfo() - Method in class com.example.project.controllers.gameScreens.SidebarController

 Binds things used in multiple screens, money, redraws plays.

braceletEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects

 Add +1 to score multiplier for every consecutive letter alphabetical order.

build() - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
 build upgrade

buttonEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects
 adds 5 to the word score for every x in the tile rack.

C

calcTotalWordScore() - Method in class com.example.project.models.gameScreens.LevelModel

canPurchase(UpgradeTileModel) - Method in class com.example.project.models.gameScreens.ShopModel

 Determines whether the player can afford to purchase the specified upgrade tile.

ClackSoundPlayer - Variable in class com.example.project.models.tiles.TileModel

clearLogs() - Method in class com.example.project.services.Logger

 Clears captured logs use in tests teardown.

clip - Variable in class com.example.project.services.sound.GameSoundPlayer

coinEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects

 20% Chance the total word score is doubled

com.example.project - module com.example.project
 project dependencies.

com.example.project - package com.example.project

com.example.project.controllers - package com.example.project.controllers

com.example.project.controllers.gameScreens - package com.example.project.controllers.gameScreens

com.example.project.controllers.gameScreens.animations - package com.example.project.controllers.gameScreens.animations

com.example.project.controllers.popupControllers - package com.example.project.controllers.popupControllers

com.example.project.controllers.TileGroups - package com.example.project.controllers.TileGroups
com.example.project.controllers.tileViewControllers - package com.example.project.controllers.tileViewControllers
com.example.project.models - package com.example.project.models
com.example.project.models.gameScreens - package com.example.project.models.gameScreens
com.example.project.models.popups - package com.example.project.models.popups
com.example.project.models.tiles - package com.example.project.models.tiles
com.example.project.services - package com.example.project.services
com.example.project.services.shopItems - package com.example.project.services.shopItems
com.example.project.services.sound - package com.example.project.services.sound
com.example.project.services.sqlite - package com.example.project.services.sqlite
com.example.project.services.sqlite.dAOs - package com.example.project.services.sqlite.dAOs
container - Variable in class com.example.project.controllers.TileGroups.TileGroupController
controller() - Method in record class com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded
 Returns the value of the controller record component.
CORNER_RADIUS - Static variable in class com.example.project.models.tiles.TileModel
 corner radius (rounded corners).
cost(double) - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
 upgrade cost builder
createDefinitionPopup(DefinitionPopup) - Static method in class com.example.project.services.PopupLoader
createEmptyTileController(EmptyTileSlotModel) - Method in class com.example.project.services.TileControllerFactory
createLetterTileController(LetterTileModel) - Method in class com.example.project.services.TileControllerFactory
createTileController(T, Class<C>) - Method in class com.example.project.services.TileControllerFactory
 Returns controller of type.
createUpgradeTileController(UpgradeTileModel) - Method in class com.example.project.services.TileControllerFactory
currentShopItemsProperty() - Method in class com.example.project.models.gameScreens.ShopModel
 Current items in the shop row that you can buy.

D

DefinitionController - Class in com.example.project.controllers.popupControllers
 Controller for definition popup
DefinitionController() - Constructor for class com.example.project.controllers.popupControllers.DefinitionController
DefinitionPopup - Class in com.example.project.models.popups
 Represents Definition window called when a word is played
DefinitionPopup() - Constructor for class com.example.project.models.popups.DefinitionPopup
definitionProperty() - Method in class com.example.project.models.popups.DefinitionPopup
description(String) - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
 upgrade description builder
diceEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects
 Value is doubled for a random letter in the played word
DictionaryDAO - Class in com.example.project.services.sqlite.dAOs
 The SQLite Dictionary.
DictionaryDAO() - Constructor for class com.example.project.services.sqlite.dAOs.DictionaryDAO
 Constructor for this class SQLLiteDictionary.
DictionaryDAO(Connection, Logger) - Constructor for class com.example.project.services.sqlite.dAOs.DictionaryDAO
 constructor with injection for tests.
doesPasswordMatch(String, String) - Method in class com.example.project.services.PasswordHasher
 Verifies a candidate password against a hashed password.
doesUserExist(String) - Method in class com.example.project.services.sqlite.dAOs.UsersDAO
drawRandomTile() - Method in class com.example.project.models.tiles.ScrabbleTileProvider

E

EmptyTileSlotController - Class in com.example.project.controllers.tileViewControllers
 Empty Tile controller for EmptyTile view.
EmptyTileSlotController() - Constructor for class com.example.project.controllers.tileViewControllers.EmptyTileSlotController
EmptyTileSlotModel - Class in com.example.project.models.tiles

An empty tile slot model.

EmptyTileSlotModel() - Constructor for class com.example.project.models.tiles.EmptyTileSlotModel

equals(Object) - Method in record class com.example.project.controllers.gameScreens.GameScreenController SidebarLoaded
Indicates whether some other object is "equal to" this one.

equals(Object) - Method in record class com.example.project.models.tiles.ScrabbleTileProvider ScrabbleTileData
Indicates whether some other object is "equal to" this one.

F

frequency() - Method in record class com.example.project.models.tiles.ScrabbleTileProvider ScrabbleTileData
Returns the value of the frequency record component.

FXMLPageLoader - Class in com.example.project.services
FXML Loader wrapper class for the project to load the game screen FXML pages.

FXMLPageLoader() - Constructor for class com.example.project.services.FXMLPageLoader
constructor.

G

GameMusicPlayer - Class in com.example.project.services.sound
Plays the game music track on repeat.

GameMusicPlayer() - Constructor for class com.example.project.services.sound GameMusicPlayer
Create new instance of game music player.

GameScenes - Enum Class in com.example.project.services
Game Scenes enum.

GameScreenController - Class in com.example.project.controllers.gameScreens
Game screen controller that has some startup on screen thing todo.

GameScreenController() - Constructor for class com.example.project.controllers.gameScreens GameScreenController

GameScreenController SidebarLoaded - Record Class in com.example.project.controllers.gameScreens

GameScreenModel - Class in com.example.project.models.gameScreens
Game Screen Model.

GameScreenModel(Session) - Constructor for class com.example.project.models.gameScreens GameScreenModel

GameSoundPlayer - Class in com.example.project.services.sound
plays an audio clip as a sound effect for the game.

GameSoundPlayer(String) - Constructor for class com.example.project.services.sound GameSoundPlayer
creates a new instance of GameSoundPlayer

GameSoundPlayer(String, float) - Constructor for class com.example.project.services.sound GameSoundPlayer
creates a new instance of GameSoundPlayer

GameSoundPlayer(String, Logger) - Constructor for class com.example.project.services.sound GameSoundPlayer

GameSoundPlayer(String, Logger, float) - Constructor for class com.example.project.services.sound GameSoundPlayer

getAbilityImagePath() - Method in class com.example.project.models.tiles.UpgradeTileModel
gets upgrade tile image path.

getChildren() - Method in class com.example.project.controllers.gameScreens.animations.AnimationWrapper
returns animations children.

getClickSoundPlayer() - Method in class com.example.project.models.tiles.TileModel
gets the sound player that plays the click sound.

getCogIcon() - Static method in class com.example.project.services.SVGIcons
gets a cog icon.

getComboLabel() - Method in class com.example.project.controllers.gameScreens SidebarController
Returns combo label.

getController() - Method in class com.example.project.services.FXMLPageLoader

getController() - Method in interface com.example.project.services.PageLoader
Get the .fxml pages controller

getControllers() - Method in class com.example.project.controllers.TileGroups TileGroupController
Gets the groups tile controllers.

getCost() - Method in class com.example.project.models.tiles.UpgradeTileModel
gets the cost

getCurrentPlays() - Method in class com.example.project.services.Session
gets the current plays.

getCurrentRedraws() - Method in class com.example.project.services.Session
gets the redraws property.

getCurrentScoreLabel() - Method in class com.example.project.controllers.gameScreens SidebarController
current score label.

getCurrentWord() - Method in class com.example.project.models.gameScreens LevelModel
Gets the current word formed by tiles in the word area

getDatabasePath() - Method in class com.example.project.services.sqlite.SQLiteConnection
Each subclass provides its database path.

getDatabasePath() - Method in class com.example.project.services.sqlite.SQLiteDictionaryConnection

getDatabasePath() - Method in class com.example.project.services.sqlite.SQLiteUsersConnection

getDescription() - Method in class com.example.project.models.tiles.UpgradeTileModel
 gets the description.

getErrorLogs() - Method in class com.example.project.services.Logger

getFXMLPath() - Method in class com.example.project.models.popups.DefinitionPopup

getFXMLPath() - Method in class com.example.project.models.popups.Popup
 gets FXML path

getFXMLPath() - Method in class com.example.project.models.tiles.EmptyTileSlotModel

getFXMLPath() - Method in class com.example.project.models.tiles.LetterTileModel

getFXMLPath() - Method in class com.example.project.models.tiles.TileModel
 gets the fxml path.

getFXMLPath() - Method in class com.example.project.models.tiles.UpgradeTileModel

getHandSize() - Method in class com.example.project.services.Session
 gets hand size.

getHighscore() - Method in class com.example.project.models.User
 get highscore.

getHoverSoundPlayer() - Method in class com.example.project.models.tiles.TileModel
 gets the hover sound player

getInstance() - Static method in class com.example.project.services.SceneManager

getInstance() - Static method in class com.example.project.services.Session
 Gets session.

getInstance() - Method in class com.example.project.services.sqlite.SQLiteConnection
 Gets the database connection from an existing readonly resource .db

getIsDefinitionActive() - Method in class com.example.project.models.popups.DefinitionPopup

getIsRedrawActive() - Method in class com.example.project.models.gameScreens.LevelModel
 gets the redraw property.

getLetter() - Method in class com.example.project.models.tiles.LetterTileModel

getLetterTileSlotProperty() - Method in class com.example.project.models.tiles.EmptyTileSlotModel

getLevelModel() - Method in class com.example.project.services.Session

getLevelRequirement() - Method in class com.example.project.services.Session

getLevelsBeaten() - Method in class com.example.project.services.Session

getLogs() - Method in class com.example.project.services.Logger

getModel() - Method in class com.example.project.controllers.popupControllers.DefinitionController

getModel() - Method in class com.example.project.controllers.popupControllers.PopupController
 gets the popup model.

getModel() - Method in class com.example.project.controllers.tileViewControllers.LetterTileController

getModel() - Method in class com.example.project.controllers.tileViewControllers.TileController
 gets the tile model.

getMoneyProperty() - Method in class com.example.project.services.Session
 Returns the read-only money property for binding to UI components.

getMultiplierLabel() - Method in class com.example.project.controllers.gameScreens.SidebarController
 word score multiplier label.

getName() - Method in class com.example.project.models.tiles.UpgradeTileModel
 gets the name.

getPaperSoundPlayer() - Method in class com.example.project.models.popups.Popup
 gets paper sound player

getPassword() - Method in class com.example.project.models.User
 get password.

getPlayersCurrentPoints() - Method in class com.example.project.models.gameScreens.LevelModel

getPlayersTotalPoints() - Method in class com.example.project.models.gameScreens.LevelModel

getRandomUpgradeTile() - Static method in class com.example.project.services.shopItems.UpgradeTiles
 Gets random upgrade tile.

getRawPointsLabel() - Method in class com.example.project.controllers.gameScreens.SidebarController
 raw points label to be multiplied by multiplier.

getRedrawWindowSize() - Method in class com.example.project.services.Session
 gets redraw window size (number of slots)

getRedrawWindowTilesProperty() - Method in class com.example.project.models.gameScreens.LevelModel

getReversePaperSoundPlayer() - Method in class com.example.project.models.popups.Popup
 gets reversed paper sound player

getRoot() - Method in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

getRoot() - Method in class com.example.project.controllers.tileViewControllers.LetterTileController
 Method in class com.example.project.controllers.tileViewControllers.TileController
 root ui node.
getRoot() - Method in class com.example.project.controllers.tileViewControllers.UpgradeTileController
getSQLiteInstance() - Method in class com.example.project.services.sqlite.SQLiteConnection
getSQLiteInstance() - Method in class com.example.project.services.sqlite.SQLiteDictionaryConnection
getSQLiteInstance() - Method in class com.example.project.services.sqlite.SQLiteUsersConnection
getStack() - Method in class com.example.project.controllers.popupControllers.DefinitionController
getStack() - Method in class com.example.project.controllers.popupControllers.PopupController
 root ui node.
getTile(int) - Static method in class com.example.project.services.shopItems.UpgradeTiles
 Gets the upgrade tile at index.
getTileRackTilesProperty() - Method in class com.example.project.models.gameScreens.LevelModel
getTileScoreSoundPlayer() - Method in class com.example.project.models.gameScreens.LevelModel
 Gets the tile score sound effect player.
getUpgradeEffect() - Method in class com.example.project.models.tiles.UpgradeTileModel
 gets the effect for this tile.
getUpgradeTilesProperty() - Method in class com.example.project.services.Session
 gets upgrade tile property
getUser(String) - Method in class com.example.project.services.sqlite.dAOs.UsersDAO
getUsername() - Method in class com.example.project.models.User
 get username.
getValue() - Method in class com.example.project.models.tiles.LetterTileModel
getValue(Character) - Method in class com.example.project.models.tiles.ScrabbleTileProvider
 Returns Integer of the letter according to scrabble
getWelcomeTextProperty() - Method in class com.example.project.models.gameScreens.LoginModel
 Gets the info text property.
getWordDefinition(String) - Method in class com.example.project.services.sqlite.dAOs.DictionaryDAO
 gets the words definition.
getWordWindowSize() - Method in class com.example.project.services.Session
 gets word size.
getWordWindowTilesProperty() - Method in class com.example.project.models.gameScreens.LevelModel
glassesEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects
 Adds +2 to the score multiplier for every identical pair of letters next to each other

H

hashCode() - Method in record class com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded
 Returns a hash code value for this object.
hashCode() - Method in record class com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData
 Returns a hash code value for this object.
hashPassword(String) - Method in class com.example.project.services.PasswordHasher
 Hashes a raw password using BCrypt.
hasLost() - Method in class com.example.project.models.gameScreens.LevelModel
 true if player has lost
hasWon() - Method in class com.example.project.models.gameScreens.LevelModel
 returns true if player has won.
HEIGHT - Static variable in class com.example.project.Application
hoverSoundPlayer - Variable in class com.example.project.models.tiles.TileModel

I

imagePath(String) - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
 upgrade image path builder
imageView - Variable in class com.example.project.controllers.tileViewControllers.UpgradeTileController
InfiniteFloatingAnimation - Class in com.example.project.controllers.gameScreens.animations
 Balatro style floating tile animation.
InfiniteFloatingAnimation() - Constructor for class
com.example.project.controllers.gameScreens.animations.InfiniteFloatingAnimation
initialise(RootLayoutController, PageLoader) - Method in class com.example.project.services.SceneManager
 loads the fxml of all the scenes on launch to switch to via scene manager.
initialize() - Method in class com.example.project.controllers.gameScreens.LevelController

initialize() - Method in class com.example.project.controllers.gameScreens.LoginController
FXML initialise function called once when the .fxml is loaded on application launch.

initialize() - Method in class com.example.project.controllers.gameScreens.MainMenuController
FXML initialise function called once when the .fxml is loaded.

initialize() - Method in class com.example.project.controllers.gameScreens.ShopController
FXML initialise function called once when the .fxml is loaded on application launch.

initialize(DefinitionPopup) - Method in class com.example.project.controllers.popupControllers.DefinitionController

initialize(P) - Method in class com.example.project.controllers.popupControllers.PopupController
sets elements of the ui

isCurrentWordValid() - Method in class com.example.project.models.gameScreens.LevelModel
returns true if word is in dictionary.

isWordInDictionary(String) - Method in class com.example.project.services.sqlite.dAOs.DictionaryDAO
gets if word is in dictionary.

L

LetterTileController - Class in com.example.project.controllers.tileViewControllers
Controls the layout of the letterUIModel.

LetterTileController() - Constructor for class com.example.project.controllers.tileViewControllers.LetterTileController

LetterTileGroupController - Class in com.example.project.controllers.TileGroups

tile group that observes an observable list and updates the ui Tile Controller's nodes into their EmptyTileSlotController nodes.

LetterTileGroupController(int, Pane, ReadOnlyListProperty<LetterTileModel>, Consumer<LetterTileController>) -
Constructor for class com.example.project.controllers.TileGroups.LetterTileGroupController
Constructor

LetterTileGroupController(int, Pane, ReadOnlyListProperty<LetterTileModel>, Consumer<LetterTileController>, List<Runnable>) - Constructor for class com.example.project.controllers.TileGroups.LetterTileGroupController
Constructor

LetterTileModel - Class in com.example.project.models.tiles

Represents the letter tiles the player plays holds, redraws.

LetterTileModel(Character) - Constructor for class com.example.project.models.tiles.LetterTileModel

LEVEL - Enum constant in enum class com.example.project.services.GameScenes
level Screen

LevelController - Class in com.example.project.controllers.gameScreens
Controller for the level screen.

LevelController() - Constructor for class com.example.project.controllers.gameScreens.LevelController
Constructor only called once each time application opened.

LevelController(LevelModel) - Constructor for class com.example.project.controllers.gameScreens.LevelController

LevelModel - Class in com.example.project.models.gameScreens
Represents the level model.

LevelModel(Session) - Constructor for class com.example.project.models.gameScreens.LevelModel
Default constructor.

LevelScoreSequence - Class in com.example.project.controllers.gameScreens.animations
Animates each level tile popping up and the score text increasing for every tile in the word row.

LevelScoreSequence(List<LetterTileController>, LevelModel, Label, Label) - Constructor for class
com.example.project.controllers.gameScreens.animations.LevelScoreSequence
Constructor.

load(String) - Method in class com.example.project.services.FXMLPageLoader

load(String) - Method in interface com.example.project.services.PageLoader
Load method to load fxml page.

loadSidebar() - Method in class com.example.project.controllers.gameScreens.GameScreenController

logError(String) - Method in class com.example.project.services.Logger
Logs an error message to standard error.

logger - Variable in class com.example.project.controllers.gameScreens.GameScreenController

logger - Variable in class com.example.project.models.gameScreens.GameScreenModel

Logger - Class in com.example.project.services
com.example.project.services.Logger for Application and to show up in test and build CI workflow.

Logger() - Constructor for class com.example.project.services.Logger
Default constructor writes to console does not capture.

Logger(ByteArrayOutputStream, ByteArrayOutputStream) - Constructor for class com.example.project.services.Logger
Constructor for unit tests.

LOGIN - Enum constant in enum class com.example.project.services.GameScenes
Login Screen.

LoginController - Class in com.example.project.controllers.gameScreens
Controller for the login scene.

LoginController() - Constructor for class com.example.project.controllers.gameScreens.LoginController
No arg constructor.

LoginModel - Class in com.example.project.models.gameScreens
Login model class.

LoginModel(Session, UsersDAO, PasswordHasher) - Constructor for class com.example.project.models.gameScreens.LoginModel
constructor.

logMessage(String) - Method in class com.example.project.services.Logger
Log message to System.out.

M

main(String[]) - Static method in class com.example.project.Application

MAINMENU - Enum constant in enum class com.example.project.services.GameScenes
Main Menu Screen.

MainMenuController - Class in com.example.project.controllers.gameScreens
controller for the main menu.

MainMenuController() - Constructor for class com.example.project.controllers.gameScreens.MainMenuController
No arg constructor.

MainMenuModel - Class in com.example.project.models.gameScreens
main menu model class

MainMenuModel(Session) - Constructor for class com.example.project.models.gameScreens.MainMenuModel
constructor.

mirrorEffect() - Static method in class com.example.project.models.tiles.UpgradeEffects
If played word is a palindrome, doubles word score.

model - Variable in class com.example.project.controllers.popupControllers.PopupController

model - Variable in class com.example.project.controllers.tileViewControllers.TileController

mute() - Method in class com.example.project.services.sound.GameSoundPlayer
set clip volume to mute.

N

name(String) - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
upgrade name builder

node() - Method in record class com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded
Returns the value of the node record component.

O

onClickAction - Variable in class com.example.project.controllers.TileGroups.TileGroupController

onConfirmRedrawButton() - Method in class com.example.project.controllers.gameScreens.LevelController
Handle redraw confirm button.

onLoginButtonClick() - Method in class com.example.project.controllers.gameScreens.LoginController

onLoginClicked(String, String) - Method in class com.example.project.models.gameScreens.LoginModel

onLogoutButtonClick() - Method in class com.example.project.controllers.gameScreens.MainMenuController

onLogoutClicked() - Method in class com.example.project.models.gameScreens.MainMenuModel
switches to the login screen

onLostLevel() - Method in class com.example.project.models.gameScreens.LevelModel
Called when the level has been lost.

onlyShopShopInfo() - Method in class com.example.project.controllers.gameScreens.SidebarController
Only show things relevant to upgrades or the shop.

onNextLevelPressed() - Method in class com.example.project.controllers.gameScreens.ShopController

onNextLevelPressed() - Method in class com.example.project.models.gameScreens.ShopModel
exists shop and increments level requirement for the next level.

onPlayButton() - Method in class com.example.project.controllers.gameScreens.LevelController
Handle play button

onRedrawButton() - Method in class com.example.project.controllers.gameScreens.LevelController
redraw button opens or cancels the redraw.

onSceneChangedToThis() - Method in class com.example.project.controllers.gameScreens.GameScreenController
Called when the game scene is changed to one of the GameScenes Login, Level, Shop etc.

onSceneChangedToThis() - Method in class com.example.project.controllers.gameScreens.LevelController

onSceneChangedToThis() - Method in class com.example.project.controllers.gameScreens.LoginController

onSceneChangedToThis() - Method in class com.example.project.controllers.gameScreens.MainMenuController

onSceneChangedToThis() - Method in class com.example.project.controllers.gameScreens.ShopController

onSignupButtonClick() - Method in class com.example.project.controllers.gameScreens.LoginController

onSignUpClicked(String, String) - Method in class com.example.project.models.gameScreens.LoginModel
Adds user to database.

onSkipButton() - Method in class com.example.project.controllers.gameScreens.LevelController

onStartButtonClick() - Method in class com.example.project.controllers.gameScreens.MainMenuController

onStartClicked() - Method in class com.example.project.models.gameScreens.MainMenuModel
switches to the level screen

onUpgradeClicked(UpgradeTileController) - Method in class com.example.project.controllers.gameScreens.ShopController

onWonLevel() - Method in class com.example.project.models.gameScreens.LevelModel
Called when level has been won.

P

PageLoader - Interface in com.example.project.services
Interface for page loading.

paperSoundPlayer - Variable in class com.example.project.models.popups.Popup

PasswordHasher - Class in com.example.project.services
Hashes passwords.

PasswordHasher() - Constructor for class com.example.project.services.PasswordHasher
public constructor.

PasswordHasher(Logger) - Constructor for class com.example.project.services.PasswordHasher

play() - Method in class com.example.project.controllers.gameScreens.animations.AnimationWrapper
play.

playersUpgradesProperty() - Method in class com.example.project.models.gameScreens.ShopModel
get what upgrades the player currently has.

playGameMusicLoop() - Method in class com.example.project.services.sound.GameMusicPlayer
play game music loop continuously.

playNextNote() - Method in class com.example.project.models.gameScreens.ScoreChimePlayer
plays the note then increments the int index.

playTiles() - Method in class com.example.project.models.gameScreens.LevelModel
clears the word row tiles.

Popup - Class in com.example.project.models.popups
Parent class for popup windows

Popup() - Constructor for class com.example.project.models.popups.Popup

PopupController<P> - Class in com.example.project.controllers.popupControllers
Parent class for PopupControllers

PopupController() - Constructor for class com.example.project.controllers.popupControllers.PopupController

PopupLoader - Class in com.example.project.services
class to load the popup and initialize it with a controller

PopupLoader() - Constructor for class com.example.project.services.PopupLoader

purchase(UpgradeTileModel) - Method in class com.example.project.models.gameScreens.ShopModel
This should attempt to purchase an upgrade tile from the shop.

R

redrawTiles() - Method in class com.example.project.models.gameScreens.LevelModel
redraws tiles into the tile rack and removes from redraw window.

regenerateShopItems() - Method in class com.example.project.models.gameScreens.ShopModel
create new shop items.

replay() - Method in class com.example.project.services.sound.GameSoundPlayer
Reset clip and then play.

reset() - Method in class com.example.project.models.gameScreens.ScoreChimePlayer
resets back to 0.

resetCombo() - Method in class com.example.project.models.gameScreens.LevelModel
resets counts for sum and multi in combo

resetGame() - Method in class com.example.project.services.Session
Resets the current session when you lose

resetPlaysRedraws() - Method in class com.example.project.services.Session
Reset the plays and redraws.

returnRedrawTilesToTheRack() - Method in class com.example.project.models.gameScreens.LevelModel
sends the selected redraw tiles back to the rack

reversePaperSoundPlayer - Variable in class com.example.project.models.popups.Popup

root - Variable in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

root - Variable in class com.example.project.controllers.tileViewControllers.UpgradeTileController

RootLayoutController - Class in com.example.project.controllers
Root layout that remains the root scene of the application to switch scenes within.

RootLayoutController() - Constructor for class com.example.project.controllers.RootLayoutController

S

SceneManager - Class in com.example.project.services

Represents the scene manager class.

SceneManager(SceneManager) - Constructor for class com.example.project.services.SceneManager
Constructor to inject an instance.

SceneManager(SceneManager, RootLayoutController, Map<GameScenes, GameScreenController>, Map<GameScenes, Parent>) - Constructor for class com.example.project.services.SceneManager
Constructor with injection for tests

ScoreChimePlayer - Class in com.example.project.models.gameScreens
plays a note from the F major scale ascending in pitch each time for a nice score combo sound.

ScoreChimePlayer() - Constructor for class com.example.project.models.gameScreens.ScoreChimePlayer

ScoreTimeline - Class in com.example.project.controllers.gameScreens.animations
Class for total score counter animation

ScoreTimeline() - Constructor for class com.example.project.controllers.gameScreens.animations.ScoreTimeline

ScrabbleTileData(int, int) - Constructor for record class com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData
Creates an instance of a ScrabbleTileData record class.

ScrabbleTileProvider - Class in com.example.project.models.tiles
Static class to store the scrabble base letter value.

ScrabbleTileProvider() - Constructor for class com.example.project.models.tiles.ScrabbleTileProvider
Constructor.

ScrabbleTileProvider.ScrabbleTileData - Record Class in com.example.project.models.tiles

seedRandomNumberGenerator(long) - Static method in class com.example.project.models.tiles.ScrabbleTileProvider

sequentialAnimation - Variable in class com.example.project.controllers.gameScreens.animations.AnimationWrapper

session - Variable in class com.example.project.models.gameScreens.GameScreenModel

Session - Class in com.example.project.services
Game Session.

Session() - Constructor for class com.example.project.services.Session
Default constructor.

Session(int, int, int, ObservableList<UpgradeTileModel>, User, int, int, int, int, int) - Constructor for class com.example.project.services.Session
Constructor for injecting values in for unit test.

setContent(Parent) - Method in class com.example.project.controllers.RootLayoutController

setIsDefinitionActive(boolean) - Method in class com.example.project.models.popups.DefinitionPopup
toggle isDefinitionActive

setIsRedrawActive(boolean) - Method in class com.example.project.models.gameScreens.LevelModel
set redraw active.

setLetter(LetterTileController) - Method in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController
updates the tile slot with a new letter tile controller.

setLevelModel(LevelModel) - Method in class com.example.project.services.Session
sets the session's level model

setModel(T) - Method in class com.example.project.controllers.tileViewControllers.TileController
Set the model this controller will observe.

setOnFinished(EventHandler<ActionEvent>) - Method in class com.example.project.controllers.gameScreens.animations.AnimationWrapper
Set on finished.

setPlayersScore(int) - Method in class com.example.project.models.gameScreens.LevelModel

setPopup(String) - Method in class com.example.project.models.popups.DefinitionPopup

setPrintToConsole(boolean) - Method in class com.example.project.services.Logger

setRoot(StackPane) - Method in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController
Unit Test for EmptyTileControllerTests

setSlotForLetterTile(StackPane) - Method in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

setSQLiteInstance(Connection) - Method in class com.example.project.services.sqlite.SQLiteConnection

setSQLiteInstance(Connection) - Method in class com.example.project.services.sqlite.SQLiteDictionaryConnection

setSQLiteInstance(Connection) - Method in class com.example.project.services.sqlite.SQLiteUsersConnection

setTile(LetterTileModel) - Method in class com.example.project.models.tiles.EmptyTileSlotModel
Set a new tile.

setTotalScore(int) - Method in class com.example.project.models.gameScreens.LevelModel

setupNewLevel() - Method in class com.example.project.models.gameScreens.LevelModel
Initialise new level.

setupProperties(LevelModel) - Method in class com.example.project.controllers.gameScreens.SidebarController
Setup sync able properties.

setUser(User) - Method in class com.example.project.services.Session
set new user.

setWordMulti(int) - Method in class com.example.project.models.gameScreens.LevelModel

sets the current word multiplier

setWordPoints(int) - Method in class com.example.project.models.gameScreens.LevelModel
sets the current word points before multipliers

SHOP - Enum constant in enum class com.example.project.services.GameScenes
Shop screen.

ShopController - Class in com.example.project.controllers.gameScreens
Shop view controller.

ShopController() - Constructor for class com.example.project.controllers.gameScreens.ShopController
no arg constructor.

ShopController(ShopModel, UpgradeTileGroupController, UpgradeTileGroupController) - Constructor for class com.example.project.controllers.gameScreens.ShopController
protected constructor for unit testing with mock model injection.

ShopModel - Class in com.example.project.models.gameScreens
Shop Model.

ShopModel(Session) - Constructor for class com.example.project.models.gameScreens.ShopModel
Constructor

SidebarController - Class in com.example.project.controllers.gameScreens
The sidebar on shop and level with the current round info.

SidebarController() - Constructor for class com.example.project.controllers.gameScreens.SidebarController

SidebarLoaded(Parent, SidebarController) - Constructor for record class com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded
Creates an instance of a SidebarLoaded record class.

slotForLetterTile - Variable in class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

spendMoney(int) - Method in class com.example.project.services.Session
This attempts to spend the specified amount of money from the player's account.

SQLiteConnection - Class in com.example.project.services.sqlite
Abstract SQLiteConnection class.

SQLiteConnection() - Constructor for class com.example.project.services.sqlite.SQLiteConnection

SQLiteDictionaryConnection - Class in com.example.project.services.sqlite
Connection to the dictionary.db

SQLiteDictionaryConnection() - Constructor for class com.example.project.services.sqlite.SQLiteDictionaryConnection

SQLiteUsersConnection - Class in com.example.project.services.sqlite
Connection to the users.db

SQLiteUsersConnection() - Constructor for class com.example.project.services.sqlite.SQLiteUsersConnection

start(Stage) - Method in class com.example.project.Application

SVGIcons - Class in com.example.project.services
a static class to hold some icons for the application.

SVGIcons() - Constructor for class com.example.project.services.SVGIcons

switchScene(GameScenes) - Method in class com.example.project.services.SceneManager
Switch between scenes specify scene type of type from GameScenes.

syncTiles() - Method in class com.example.project.controllers.TileGroups.TileGroupController
Sync tiles in this tile groups controller.

T

TextEmphasisAnimation - Class in com.example.project.controllers.gameScreens.animations
An animation to quickly enlarge text and then return it to its original scale.

TextEmphasisAnimation(Label, Paint, Paint, Duration) - Constructor for class com.example.project.controllers.gameScreens.animations.TextEmphasisAnimation
create the animations for text growing then shrinking

TileController<T> - Class in com.example.project.controllers.tileViewControllers
Parent class of TileControllers.

TileController() - Constructor for class com.example.project.controllers.tileViewControllers.TileController

tileControllerFactory - Variable in class com.example.project.controllers.TileGroups.TileGroupController

TileControllerFactory - Class in com.example.project.services
class to load the tile model controller for that tile model type.

TileControllerFactory() - Constructor for class com.example.project.services.TileControllerFactory
Creates instance of TileControllerFactory.

TileControllerFactory(FXMLLoaderPageLoader) - Constructor for class com.example.project.services.TileControllerFactory

tileControllers - Variable in class com.example.project.controllers.TileGroups.TileGroupController

TileGroupController<modelType,controllerType> - Class in com.example.project.controllers.TileGroups
Tile Group abstract class holds a row or column of tiles.

TileModel - Class in com.example.project.models.tiles
Parent tile class for objects in the scene that are tiles.

TileModel() - Constructor for class com.example.project.models.tiles.TileModel

TITLE - Static variable in class com.example.project.Application

toString() - Method in record class com.example.project.controllers.gameScreens.GameScreenController.SidebarLoaded
Returns a string representation of this record class.

toString() - Method in record class com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData
Returns a string representation of this record class.

tryMoveTile(LetterTileModel) - Method in class com.example.project.models.gameScreens.LevelModel
Determines where tile should go and moves it

U

unMute() - Method in class com.example.project.services.sound.GameSoundPlayer
Set clip to its default volume.

updateLevelInfo() - Method in class com.example.project.services.Session
Increments how many points are required to beat the level.

updateVisuals() - Method in class com.example.project.controllers.TileGroups.LetterTileGroupController

updateVisuals() - Method in class com.example.project.controllers.TileGroups.TileGroupController

updateVisuals() - Method in class com.example.project.controllers.TileGroups.UpgradeTileGroupController

UpgradeBuilder() - Constructor for class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder

upgradeEffect(Runnable) - Method in class com.example.project.models.tiles.UpgradeTileModel.UpgradeBuilder
upgrade effect builder

UpgradeEffects - Class in com.example.project.models.tiles
upgrade effect methods

UpgradeEffects() - Constructor for class com.example.project.models.tiles.UpgradeEffects

UpgradeTileController - Class in com.example.project.controllers.tileViewControllers
Controls the upgrade tile view fxml file.

UpgradeTileController() - Constructor for class com.example.project.controllers.tileViewControllers.UpgradeTileController

UpgradeTileGroupController - Class in com.example.project.controllers.TileGroups
tile group that observes an observable list and updates the ui nodes for some game tiles.

UpgradeTileGroupController(Pane, ReadOnlyListProperty<UpgradeTileModel>) - Constructor for class
com.example.project.controllers.TileGroups.UpgradeTileGroupController
Constructor with no additional sync action parameter.

UpgradeTileGroupController(Pane, ReadOnlyListProperty<UpgradeTileModel>, Consumer<UpgradeTileController>) -
Constructor for class com.example.project.controllers.TileGroups.UpgradeTileGroupController
Constructor.

UpgradeTileModel - Class in com.example.project.models.tiles
Represents the upgrade tiles sold at the shop.

UpgradeTileModel(UpgradeTileModel.UpgradeBuilder) - Constructor for class
com.example.project.models.tiles.UpgradeTileModel
public upgrade constructor.

UpgradeTileModel.UpgradeBuilder - Class in com.example.project.models.tiles
builder class for the upgrades

UpgradeTiles - Class in com.example.project.services.shopItems
Static class to store all the possible upgrade tiles available in the game.

UpgradeTiles() - Constructor for class com.example.project.services.shopItems.UpgradeTiles

User - Class in com.example.project.models
Represents a user in the application that can log in.

User(String, String, int) - Constructor for class com.example.project.models.User
Constructor.

UsersDAO - Class in com.example.project.services.sqlite.dAOs
SQLite Users database.

UsersDAO() - Constructor for class com.example.project.services.sqlite.dAOs.UsersDAO
Constructor for this class SQLiteDictionary.

UsersDAO>PasswordHasher, Connection, Logger) - Constructor for class com.example.project.services.sqlite.dAOs.UsersDAO

UsersDAO(Connection, Logger) - Constructor for class com.example.project.services.sqlite.dAOs.UsersDAO
Constructor with injection for unit tests.

V

value() - Method in record class com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData
Returns the value of the `value` record component.

valueOf(String) - Static method in enum class com.example.project.services.GameScenes
Returns the enum constant of this class with the specified name.

values() - Static method in enum class com.example.project.services.GameScenes
Returns an array containing the constants of this enum class, in the order they are declared.

W

WIDTH - Static variable in class com.example.project.Application

wordMultiProperty() - Method in class com.example.project.models.gameScreens.LevelModel
word multiplier.

wordPointsProperty() - Method in class com.example.project.models.gameScreens.LevelModel

wordProperty() - Method in class com.example.project.models.popups.DefinitionPopup

```

```
onConfirmRedrawButton()
```

Handle redraw confirm button.

```
protected void
```

onPlayButton()

Handle play button

protected void onRedrawButton()

redraw button opens or cancels the redraw.

void

onSceneChangedToThis()

Called when the game scene is changed to one of the GameScenes Login, Level, Shop etc.

protected void onSkipButton()

Methods inherited from class com.example.project.controllers.gameScreens.GameScreenController

loadSidebar

Methods inherited from class java.lang.Object

clone[✉], equals[✉], finalize[✉], getClass[✉], hashCode[✉], notify[✉], notifyAll[✉], toString[✉], wait[✉], wait[✉], wait[✉]

Constructor Details

LevelController

public LevelController()

Constructor only called once each time application opened.

LevelController

protected LevelController(LevelModel model)

Method Details

initialize

public void initialize()

See Also:

for the money binding

onSceneChangedToThis

public void onSceneChangedToThis()

Description copied from class: GameScreenController

Called when the game scene is changed to one of the GameScenes Login, Level, Shop etc.

Specified by:

onSceneChangedToThis in class GameScreenController

onPlayButton

protected void onPlayButton()

Handle play button

onSkipButton

```
protected void onSkipButton()
```

onRedrawButton

```
protected void onRedrawButton()
```

redraw button opens or cancels the redraw.

onConfirmRedrawButton

```
protected void onConfirmRedrawButton()
```

Handle redraw confirm button.

no arg constructor.

ShopController

```
protected ShopController(ShopModel model,  
                         UpgradeTileGroupController players,  
                         UpgradeTileGroupController shopItems)
```

protected constructor for unit testing with mock model injection.

Method Details

initialize

```
public void initialize()
```

FXML initialise function called once when the .fxml is loaded on application launch.

onSceneChangedToThis

```
public void onSceneChangedToThis()
```

Description copied from class: GameScreenController

Called when the game scene is changed to one of the GameScenes Login, Level, Shop etc.

Specified by:

onSceneChangedToThis in class GameScreenController

onUpgradeClicked

```
protected void onUpgradeClicked(UpgradeTileController controller)
```

Parameters:

controller - upgrade tile ui element clicked on.

onNextLevelPressed

```
protected void onNextLevelPressed()
```

Module com.example.project

Package com.example.project.controllers.gameScreens

Class SidebarController

java.lang.Object
com.example.project.controllers.gameScreens.SidebarController

```
public class SidebarController  
extends Object
```

The sidebar on shop and level with the current round info.

Constructor Summary

Modifier and Type

Method

Description

void

bindPersistentInfo()

Binds things used in multiple screens, money, redraws plays.

javafx.scene.control.Label

getComboLabel()

Returns combo label.

javafx.scene.control.Label

getCurrentScoreLabel()

current score label.

javafx.scene.control.Label

getMultiplierLabel()

word score multiplier label.

javafx.scene.control.Label

getRawPointsLabel()

raw points label to be multiplied by multiplier.

void

onlyShopShopInfo()

Only show things relevant to upgrades or the shop.

void

setupProperties(LevelModel levelModel)

Setup sync able properties.

Methods inherited from class java.lang.Object

[clone](#), [equals](#), [finalize](#), [getClass](#), [hashCode](#), [notify](#), [notifyAll](#), [toString](#), [wait](#), [wait](#), [wait](#)

Method Details

bindPersistentInfo

```
public void bindPersistentInfo()
```

Binds things used in multiple screens, money, redraws plays.

onlyShopShopInfo

```
public void onlyShopShopInfo()
```

Only show things relevant to upgrades or the shop. Money, redraws, plays.

getComboLabel

```
public javafx.scene.control.Label getComboLabel()
```

Returns combo label.

Returns:

combo label.

setupProperties

```
public void setupProperties(LevelModel levelModel)
```

Setup sync able properties.

Parameters:

levelModel - level model.

getRawPointsLabel

```
public javafx.scene.control.Label getRawPointsLabel()
```

raw points label to be multiplied by multiplier.

Returns:

label.

getCurrentScoreLabel

```
public javafx.scene.control.Label getCurrentScoreLabel()
```

current score label.

Returns:

label.

getmultiplierLabel

```
public javafx.scene.control.Label getmultiplierLabel()
```

word score multiplier label.

Returns:

label.

Module com.example.project

Package com.example.project.controllers.gameScreens.animations

Class AnimationWrapper

java.lang.Object[↳]
com.example.project.controllers.gameScreens.animations.AnimationWrapper

Direct Known Subclasses:

LevelScoreSequence, TextEmphasisAnimation

```
public abstract class AnimationWrapper  
extends Object↳
```

Animation wrapper class for our projects animations that get used.

Constructor Details

ScoreTimeline

```
public ScoreTimeline()
```

Method Details

animateTotalScore

```
public javafx.animation.Timeline animateTotalScore(int startScore,  
                                                 int endScore,  
                                                 javafx.scene.control.Label currentScoreLabel,  
                                                 long totalDurationMillis)
```

Parameters:

`startScore` - int from current total score

`endScore` - int from calculated current score

`currentScoreLabel` - Label for total score

`totalDurationMillis` - total duration

Returns:

timeline of total score counter

Module com.example.project

Package com.example.project.controllers.gameScreens.animations

Class TextEmphasisAnimation

```
java.lang.Object
    com.example.project.controllers.gameScreens.animations.AnimationWrapper
        com.example.project.controllers.gameScreens.animations.TextEmphasisAnimation
```

```
public class TextEmphasisAnimation
extends AnimationWrapper
```

An animation to quickly enlarge text and then return it to its original scale.

Field Summary

sequentialAnimation

Constructor Summary

Constructors

Constructor

Description

TextEmphasisAnimation(javafx.scene.control.Label textToAnimate, javafx.scene.paint.Paint colorAtStart, javafx.scene.paint.Paint changeColourAtEnd, javafx.util.Duration timePauseAfterAnim)

create the animations for text growing then shrinking

Method Summary

Methods inherited from

class com.example.project.controllers.gameScreens.animations.AnimationWrapper

getChildren, play, setOnFinished

Methods inherited from class java.lang.Object

clone, equals, finalize, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

Constructor Details

TextEmphasisAnimation

```
public TextEmphasisAnimation(javafx.scene.control.Label textToAnimate,
                            javafx.scene.paint.Paint colorAtStart,
                            javafx.scene.paint.Paint changeColourAtEnd,
                            javafx.util.Duration timePauseAfterAnim)
```

create the animations for text growing then shrinking

Parameters:

textToAnimate - Label.

colorAtStart - initial colour change.

changeColourAtEnd - colour change after finished.

timePauseAfterAnim - time delay after animation until animation finished.

```

Constructor Details

LetterTileGroupController

```
public LetterTileGroupController(int numberOfEmptyTileSlots,
                                javafx.scene.layout.Pane container,
                                javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList,
                                Consumer<LetterTileController> onClickHandler,
                                List<Runnable> afterSyncActions)
```

Constructor

Parameters:

numberOfEmptyTileSlots - number of max tiles in group (empty slots)

container - container to place all in.

observedList - the observed list.

onClickHandler - On tile click action.

afterSyncActions - additional synchronisation actions that need to happen when this observed list changes.

LetterTileGroupController

```
public LetterTileGroupController(int numberOfEmptyTileSlots,
                                javafx.scene.layout.Pane container,
                                javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList,
                                Consumer<LetterTileController> onClickAction)
```

Constructor

Parameters:

numberOfEmptyTileSlots - number of max tiles in group (empty slots)

container - container to place all in.

observedList - the observed list.

onClickAction - On tile click action.

- [com.example.project.controllers.popupControllers.PopupController<P>](#)
 - [com.example.project.controllers.DefinitionController](#)

Uses of Package com.example.project.controllers.popupControllers

Packages that use com.example.project.controllers.popupControllers

Package	Description
com.example.project.controllers.popupControllers	
com.example.project.services	

Classes in com.example.project.controllers.popupControllers used by com.example.project.controllers.popupController

Class	Description
PopupController	Parent class for PopupControllers

Classes in com.example.project.controllers.popupControllers used by com.example.project.services

Class	Description
DefinitionController	Controller for definition popup

Module com.example.project

Package com.example.project.controllers.tileViewControllers

Class EmptyTileSlotController

```
java.lang.Object
    com.example.project.controllers.tileViewControllers.TileController<EmptyTileSlotModel>
        com.example.project.controllers.tileViewControllers.EmptyTileSlotController
```

```
public class EmptyTileSlotController
extends TileController<EmptyTileSlotModel>
```

Empty Tile controller for EmptyTile view.

```
protected javafx.scene.layout.StackPane root
```

slotForLetterTile

```
protected javafx.scene.layout.StackPane slotForLetterTile
```

Constructor Details

EmptyTileSlotController

```
public EmptyTileSlotController()
```

Method Details

bind

```
public void bind(EmptyTileSlotModel modelToUse)
```

Description copied from class: TileController

Binds tile to the controller as its model.

Specified by:

bind in class TileController<EmptyTileSlotModel>

Parameters:

modelToUse - tile to bind.

getRoot

```
public javafx.scene.Node getRoot()
```

Description copied from class: TileController

root ui node.

Specified by:

getRoot in class TileController<EmptyTileSlotModel>

Returns:

setRoot

```
protected void setRoot/javafx.scene.layout.StackPane root)
```

Unit Test for EmptyTileControllerTests

Parameters:

root - injecting Stackpane manually

setSlotForLetterTile

```
protected void setSlotForLetterTile/javafx.scene.layout.StackPane slot)
```

setLetter

```
public void setLetter/LetterTileController letterController)
```

updates the tile slot with a new letter tile controller.

Parameters:

letterController - the letter tiles controller.

Module com.example.project

Package com.example.project.controllers.tileViewControllers

Class LetterTileController

```
java.lang.Object
  com.example.project.controllers.tileViewControllers.TileController<LetterTileModel>
    com.example.project.controllers.tileViewControllers.LetterTileController
```

```
public class LetterTileController
extends TileController<LetterTileModel>
```

Controls the layout of the letterUIModel. Which is a letter tile.

Field Summary

Constructors

Constructor

Description

`LetterTileController()`

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

`void`

`bind(LetterTileModel tile)`

Binds tile to the controller as its model.

`LetterTileModel`

`getModel()`

gets the tile model.

`javafx.scene.Node`

`getRoot()`

root ui node.

Methods inherited from class com.example.project.controllers.tileViewControllers.TileController

`setModel`

Methods inherited from class java.lang.Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Constructor Details

LetterTileController

```
public LetterTileController()
```

Method Details

getRoot

```
public javafx.scene.Node getRoot()
```

Description copied from class: [TileController](#)

root ui node.

Specified by:

[getRoot](#) in class [TileController<LetterTileModel>](#)

Returns:

root ui Node

getModel

```
public LetterTileModel getModel()
```

Description copied from class: [TileController](#)

gets the tile model.

Overrides:

[getModel](#) in class [TileController<LetterTileModel>](#)

Returns:

model.

bind

```
public void bind(LetterTileModel tile)
```

Description copied from class: [TileController](#)

Binds tile to the controller as its model.

Specified by:

[bind](#) in class [TileController<LetterTileModel>](#)

Parameters:

tile - tile to bind.

Module com.example.project

Package com.example.project.controllers.tileViewControllers

Class TileController<T extends TileModel>

java.lang.Object ↗
com.example.project.controllers.tileViewControllers.TileController<T>

Type Parameters:

T - tile model type.

Direct Known Subclasses:

EmptyTileSlotController, LetterTileController, UpgradeTileController

```
public abstract class TileController<T extends TileModel>
extends Object ↗
```

Parent class of TileControllers.

getModel()

gets the tile model.

abstract javafx.scene.Node

getRoot()

root ui node.

void

setModel(T tile)

Set the model this controller will observe.

Methods inherited from class java.lang.Object

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Field Details

model

`protected T extends TileModel model`

Constructor Details

TileController

`public TileController()`

Method Details

getRoot

`public abstract javafx.scene.Node getRoot()`

root ui node.

Returns:

root ui Node

bind

`public abstract void bind(T tile)`

Binds tile to the controller as its model.

Parameters:

tile - tile to bind.

setModel

`public void setModel(T tile)`

Set the model this controller will observe.

Parameters:

tile - tile model class.

getModel

`public T getModel()`

gets the tile model.

Returns:

model.

Module com.example.project

Package com.example.project.controllers.tileViewControllers

Class UpgradeTileController

java.lang.Object
 com.example.project.controllers.tileViewControllers.TileController<UpgradeTileModel>
 com.example.project.controllers.tileViewControllers.UpgradeTileController

```
public class UpgradeTileController  
extends TileController<UpgradeTileModel>
```

Controls the upgrade tile view fxml file.

`root`

`protected javafx.scene.layout.StackPane root`

`imageView`

`protected javafx.scene.image.ImageView imageView`

Constructor Details

`UpgradeTileController`

`public UpgradeTileController()`

Method Details

`getRoot`

`public javafx.scene.Node getRoot()`

Description copied from class: `TileController`

root ui node.

Specified by:

`getRoot` in class `TileController<UpgradeTileModel>`

Returns:

root ui Node

`bind`

`public void bind(UpgradeTileModel tileModel)`

Description copied from class: `TileController`

Binds tile to the controller as its model.

Specified by:

`bind` in class `TileController<UpgradeTileModel>`

Parameters:

tileModel - tile to bind.

Uses of Class com.example.project.controllers.tileViewControllers.EmptyTileSlotController

Packages that use EmptyTileSlotController

Package

Description

com.example.project.services

Uses of EmptyTileSlotController in com.example.project.services

Method

Description

EmptyTileSlotController

TileControllerFactory.createEmptyTileController(EmptyTileSlotModel emptyTile)

Module com.example.project

Package com.example.project.controllers.TileGroups

Class TileGroupController<modelType extends TileModel, controllerType extends TileController<modelType>>

java.lang.Object²
com.example.project.controllers.TileGroups.TileGroupController<modelType, controllerType>

Type Parameters:

modelType - tile model type.

controllerType - controller type.

Direct Known Subclasses:

[LetterTileGroupController](#), [UpgradeTileGroupController](#)

public abstract class TileGroupController<modelType extends TileModel, controllerType extends TileController<modelType>>
extends Object²

Tile Group abstract class holds a row or column of tiles.

```

tileControllerFactory

```
protected final TileControllerFactory tileControllerFactory
```

onClickAction

```
protected Consumer<controllerType extends TileController<modelType>> onClickAction
```

Method Details

updateVisuals

```
protected abstract void updateVisuals()
```

syncTiles

```
public void syncTiles()
```

Sync tiles in this tile groups controller.

getControllers

```
public List<controllerType> getControllers()
```

Gets the groups tile controllers.

Returns:

the letter tile groups controllers

Uses of Class

com.example.project.controllers.tileViewControllers.LetterTileController

Packages that use LetterTileController

Package

Description

com.example.project.controllers.gameScreens.animations

com.example.project.controllers.TileGroups

com.example.project.controllers.tileViewControllers

com.example.project.services

Uses of LetterTileController in com.example.project.controllers.gameScreens.animations

Constructor parameters in com.example.project.controllers.gameScreens.animations with type arguments of type LetterTileController

Modifier

Constructor

Description

```
LevelScoreSequence(List<LetterTileController> wordTileControllers, LevelModel levelModel,  
javafx.scene.control.Label comboCountLabel, javafx.scene.control.Label multiplierLabel)
```

Constructor.

Uses of LetterTileController in com.example.project.controllers.TileGroups

Constructor parameters in com.example.project.controllers.TileGroups with type arguments of type LetterTileController

Modifier

Constructor

Description

```
LetterTileGroupController(int numberEmptyTileSlots, javafx.scene.layout.Pane container,  
javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList, Consumer<  
<LetterTileController>> onClickAction)
```

Constructor

```
LetterTileGroupController(int numberEmptyTileSlots, javafx.scene.layout.Pane container,  
javafx.beans.property.ReadOnlyListProperty<LetterTileModel> observedList, Consumer<  
<LetterTileController>> onClickHandler, List<Runnable> afterSyncActions)
```

Constructor

Uses of LetterTileController in com.example.project.controllers.tileViewControllers

Methods in com.example.project.controllers.tileViewControllers with parameters of type LetterTileController

Modifier and Type

Method

Description

void

EmptyTileSlotController.setLetter(LetterTileController letterController)

updates the tile slot with a new letter tile controller.

Uses of **LetterTileController** in *com.example.project.services*

Methods in *com.example.project.services* that return **LetterTileController**

Modifier and Type

Method

Description

LetterTileController

TileControllerFactory.createLetterTileController(LetterTileModel lt)

Uses of Class com.example.project.controllers.tileViewControllers.TileController

Packages that use TileController

Package

Description

com.example.project.controllers.TileGroups

com.example.project.controllers.tileViewControllers

com.example.project.services

Uses of TileController in com.example.project.controllers.TileGroups

Classes in com.example.project.controllers.TileGroups with type parameters of type TileController

Modifier and Type

Class

Description

class

`TileGroupController<modelType extends TileModel, controllerType extends TileController<modelType>>`

Tile Group abstract class holds a row or column of tiles.

Uses of TileController in com.example.project.controllers.tileViewControllers

Subclasses of TileController in com.example.project.controllers.tileViewControllers

Modifier and Type

Class

Description

class

`EmptyTileSlotController`

Empty Tile controller for EmptyTile view.

class

`LetterTileController`

Controls the layout of the letterUIModel.

class

`UpgradeTileController`

Controls the upgrade tile view fxml file.

Uses of TileController in com.example.project.services

Methods in com.example.project.services with type parameters of type TileController

Modifier and Type

Method

Description

`<C extends TileController<T>, T extends TileModel>`

C

TileControllerFactory.createTileController(T tile, Class<?> controllerType)

Returns controller of type.

Uses of Class com.example.project.controllers.tileViewControllers.UpgradeTileController

Packages that use UpgradeTileController

Package

Description

com.example.project.controllers.gameScreens

com.example.project.controllers.TileGroups

com.example.project.services

Uses of UpgradeTileController in com.example.project.controllers.gameScreens

Methods in com.example.project.controllers.gameScreens with parameters of type UpgradeTileController

Modifier and Type

Method

Description

protected void

`ShopController.onUpgradeClicked(UpgradeTileController controller)`

Uses of UpgradeTileController in com.example.project.controllers.TileGroups

Constructor parameters in com.example.project.controllers.TileGroups with type arguments of type UpgradeTileCo

Modifier

Constructor

Description

`UpgradeTileGroupController(javafx.scene.layout.Pane container,
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList, Consumer<
<UpgradeTileController> afterSyncActions)`

Constructor.

Uses of UpgradeTileController in com.example.project.services

Methods in com.example.project.services that return UpgradeTileController

Modifier and Type

Method

Description

`UpgradeTileController`

`TileControllerFactory.createUpgradeTileController(UpgradeTileModel upgradeTile)`

Module com.example.project

Method

Description

int

getHighscore()

get highscore.

String[✉]

getPassword()

get password.

String[✉]

getUsername()

get username.

Methods inherited from class java.lang.Object[✉]

clone[✉], equals[✉], finalize[✉], getClass[✉], hashCode[✉], notify[✉], notifyAll[✉], toString[✉], wait[✉], wait[✉], wait[✉]

Constructor Details

User

```
public User(String✉ username,  
          String✉ password,  
          int highscore)
```

Constructor.

Parameters:

username - username.

password - password.

highscore - highscore.

Method Details

getUsername

```
public String¶ getUsername()
```

get username.

Returns:

username.

getPassword

```
public String¶ getPassword()
```

get password.

Returns:

password.

getHighscore

```
public int getHighscore()
```

get highscore.

Returns:

returns highscore.

Uses of Class com.example.project.models.User

Packages that use User

Package

Description

com.example.project.services

com.example.project.services.sqlite.dAOs

Uses of User in com.example.project.services

Methods in com.example.project.services with parameters of type User

Modifier and Type

Method

Description

void

Session.setUser(User newUser)

set new user.

Constructors in com.example.project.services with parameters of type User

Modifier

Constructor

Description

protected void

addTileToRack(LetterTileModel tile)

protected void

addTileToRedrawWindow(LetterTileModel tile)

```
protected void
addTileToWordWindow(LetterTileModel tile)

void
addToCombo(LetterTileModel tile)
add combo sum and multiCombo

int
calcTotalWordScore()

String
getCurrentWord()
Gets the current word formed by tiles in the word area

javafx.beans.property.ReadOnlyBooleanProperty
getIsRedrawActive()
gets the redraw property.

javafx.beans.property.ReadOnlyIntegerProperty
getPlayersCurrentPoints()

javafx.beans.property.ReadOnlyIntegerProperty
getPlayersTotalPoints()

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>
getRedrawWindowTilesProperty()

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>
getTileRackTilesProperty()

ScoreChimePlayer
getTileScoreSoundPlayer()
Gets the tile score sound effect player.

javafx.beans.property.ReadOnlyListProperty<LetterTileModel>
getWordWindowTilesProperty()

boolean
hasLost()
true if player has lost

boolean
hasWon()
returns true if player has won.

boolean
isCurrentWordValid()
returns true if word is in dictionary.

void
onLostLevel()
Called when the level has been lost.
```

```
void  
onWonLevel()  
Called when level has been won.
```

```
void  
playTiles()  
clears the word row tiles.
```

```
void  
redrawTiles()  
redraws tiles into the tile rack and removes from redraw window.
```

```
void  
resetCombo()  
resets counts for sum and multi in combo
```

```
void  
returnRedrawTilesToTheRack()  
sends the selected redraw tiles back to the rack
```

```
void  
setIsRedrawActive(boolean newValue)  
set redraw active.  
  
protected void  
setPlayersScore(int newValue)
```

```
void  
setTotalScore(int totalScore)
```

```
void  
setupNewLevel()  
Initialise new level.
```

```
void  
setWordMulti(int newMulti)  
sets the current word multiplier
```

```
void  
setWordPoints(int newWordPoints)  
sets the current word points before multipliers
```

```
boolean  
tryMoveTile(LetterTileModel tile)  
determines where tile should go and moves it
```

```
javafx.beans.property.ReadOnlyIntegerProperty  
wordMultiProperty()  
word multiplier.  
  
javafx.beans.property.ReadOnlyIntegerProperty  
wordPointsProperty()
```

Methods inherited from class `java.lang.Object`

`clone`, `equals`, `finalize`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

Property Details

wordPoints

```
public javafx.beans.property.ReadOnlyIntegerProperty wordPointsProperty
```

See Also:

[setWordPoints\(int\)](#), [wordPointsProperty\(\)](#)

wordMulti

```
public javafx.beans.property.ReadOnlyIntegerProperty wordMultiProperty
```

word multiplier.

See Also:

[setWordMulti\(int\)](#), [wordMultiProperty\(\)](#)

Constructor Details

LevelModel

```
public LevelModel(Session session)
```

Default constructor.

Parameters:

session - session

Method Details

getTileScoreSoundPlayer

```
public ScoreChimePlayer getTileScoreSoundPlayer()
```

Gets the tile score sound effect player.

Returns:

LevelTileScoreSoundPlayer.

getWordWindowTilesProperty

```
public javafx.beans.property.ReadOnlyListProperty<LetterTileModel> getWordWindowTilesProperty()
```

Returns:

Read-only list of tiles currently in the word area

getTileRackTilesProperty

```
public javafx.beans.property.ReadOnlyListProperty<LetterTileModel> getTileRackTilesProperty()
```

Returns:

Read-only list of tiles currently in the rack

getRedrawWindowTilesProperty

```
public javafx.beans.property.ReadOnlyListProperty<LetterTileModel> getRedrawWindowTilesProperty()
```

Returns:

Read-only list of tiles currently in the redraw window.

getPlayersTotalPoints

```
public javafx.beans.property.ReadOnlyIntegerProperty getPlayersTotalPoints()
```

Returns:

the total points property to observe.

wordPointsProperty

```
public javafx.beans.property.ReadOnlyIntegerProperty wordPointsProperty()
```

Returns:

the sum combo points property to observe.

See Also:

[setWordPoints\(int\)](#)

getPlayersCurrentPoints

```
public javafx.beans.property.ReadOnlyIntegerProperty getPlayersCurrentPoints()
```

Returns:

the players current level points property to observe.

wordMultiProperty

```
public javafx.beans.property.ReadOnlyIntegerProperty wordMultiProperty()
```

word multiplier.

Returns:

multiplier.

See Also:

[setWordMulti\(int\)](#)

getIsRedrawActive

```
public javafx.beans.property.ReadOnlyBooleanProperty getIsRedrawActive()
```

gets the redraw property.

Returns:

returns indication if redraw active.

setIsRedrawActive

```
public void setIsRedrawActive(boolean newValue)
```

set redraw active.

Parameters:

newValue - get if redraw window is on screen.

setPlayersScore

```
protected void setPlayersScore(int newValue)
```

addTileToWordWindow

```
protected void addTileToWordWindow(LetterTileModel tile)
```

addTileToRack

```
protected void addTileToRack(LetterTileModel tile)
```

addTileToRedrawWindow

```
protected void addTileToRedrawWindow(LetterTileModel tile)
```

onLostLevel

```
public void onLostLevel()
```

Called when the level has been lost. resets the players session info and logs back out to the login screen.

onWonLevel

```
public void onWonLevel()
```

Called when level has been won. reset the per level info: redraws plays. Goes to shop window.

hasWon

```
public boolean hasWon()
```

returns true if player has won.

Returns:

value indicating if player has won.

hasLost

```
public boolean hasLost()
```

true if player has lost

Returns:

value indicating if player has lost.

tryMoveTile

```
public boolean tryMoveTile(LetterTileModel tile)
```

determines where tile should go and moves it

Parameters:

tile - The tile to move

Returns:

true if move was successful, false otherwise

getCurrentWord

```
public String getCurrentWord()
```

Gets the current word formed by tiles in the word area

Returns:

returns current word string.

isCurrentWordValid

```
public boolean isCurrentWordValid()
```

returns true if word is in dictionary.

Returns:

value indicating if word is valid.

redrawTiles

```
public void redrawTiles()
```

redraws tiles into the tile rack and removes from redraw window.

addToCombo

```
public void addToCombo(LetterTileModel tile)
```

add combo sum and multiCombo

Parameters:

tile - tile.

calcTotalWordScore

```
public int calcTotalWordScore()
```

Returns:

total score int

setWordPoints

```
public void setWordPoints(int newWordPoints)
```

sets the current word points before multipliers

Parameters:

newWordPoints - the new word points value

setWordMulti

```
public void setWordMulti(int newMulti)
```

sets the current word multiplier

Parameters:

newMulti - the new multiplier value

setTotalScore

```
public void setTotalScore(int totalScore)
```

Parameters:

totalScore - from calcTotalScore sets Total Score

playTiles

```
public void playTiles()
```

clears the word row tiles. and refills the tile rack. and decreases the plays left.

returnRedrawTilesToTheRack

```
public void returnRedrawTilesToTheRack()
```

sends the selected redraw tiles back to the rack

setupNewLevel

```
public void setupNewLevel()
```

Initialise new level. Clears word row, redraw rack. draws new tiles for the player's tile rack.

resetCombo

```
public void resetCombo()
```

resets counts for sum and multi in combo

Module com.example.project

Package com.example.project.controllers.TileGroups

Class UpgradeTileGroupController

```
java.lang.Object
    com.example.project.controllers.TileGroups.TileGroupController<UpgradeTileModel,UpgradeTileController>
        com.example.project.controllers.TileGroups.UpgradeTileGroupController
```

```
public class UpgradeTileGroupController
extends TileGroupController<UpgradeTileModel,UpgradeTileController>
```

tile group that observes an observable list and updates the ui nodes for some game tiles.

Field Summary

Fields inherited from class com.example.project.controllers.TileGroups.TileGroupController

```
container, onClickAction, tileControllerFactory, tileControllers
```

Constructor Summary

Constructors

Constructor

Description

```
UpgradeTileGroupController(javafx.scene.layout.Pane container,
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList)
```

Constructor with no additional sync action parameter.

```
UpgradeTileGroupController(javafx.scene.layout.Pane container,
javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList, Consumer<UpgradeTileController> afterSyncActions)
```

Constructor.

```

Constructor Details

UpgradeTileGroupController

```
public UpgradeTileGroupController(javafx.scene.layout.Pane container,
                                  javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList,
                                  Consumer<UpgradeTileController> afterSyncActions)
```

Constructor.

Parameters:

container - container all tiles are in.

observedList - the observed list that when changes this tile group will sync.

afterSyncActions - additional synchronisation actions that need to be called.

UpgradeTileGroupController

```
public UpgradeTileGroupController(javafx.scene.layout.Pane container,
                                  javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> observedList)
```

Constructor with no additional sync action parameter.

Parameters:

container - container tiles are in.

observedList - the observed list that when changes this tile group will sync.

Method Details

updateVisuals

```
protected void updateVisuals()
```

Specified by:

`updateVisuals` in class `TileGroupController<UpgradeTileModel, UpgradeTileController>`

Module com.example.project

Modifier and Type

Method

Description

`javafx.beans.property.ReadOnlyStringProperty`

`getWelcomeTextProperty()`

Gets the info text property.

`void`

`onLoginClicked(String✉ username, String✉ password)`

`void`

`onSignUpClicked(String✉ username, String✉ password)`

Adds user to database.

Methods inherited from class java.lang.Object[↳]

`clone✉, equals✉, finalize✉, getClass✉, hashCode✉, notify✉, notifyAll✉, toString✉, wait✉, wait✉, wait✉`

Constructor Details

LoginModel

```
public LoginModel(Session session,  
                  UsersDAO dao,  
                  PasswordHasher passwordHasher)
```

constructor.

Parameters:

session - session to use for the game.
dao - users database implementation.
passwordHasher - password hasher for this login

Method Details

getWelcomeTextProperty

```
public javafx.beans.property.ReadOnlyStringProperty getWelcomeTextProperty()
```

Gets the info text property.

Returns:

ReadonlyStringProperty.

onLoginClicked

```
public void onLoginClicked(String username,  
                           String password)
```

Parameters:

username - username.

password - password.

onSignUpClicked

```
public void onSignUpClicked(String username,  
                           String password)
```

Adds user to database.

Parameters:

username - username

password - password

Module com.example.project

boolean

```
canPurchase(UpgradeTileModel tile)
```

Determines whether the player can afford to purchase the specified upgrade tile.

```
javafx.beans.property.ListProperty<UpgradeTileModel>
```

```
currentShopItemsProperty()
```

Current items in the shop row that you can buy.

void

onNextLevelPressed()

exists shop and increments level requirement for the next level.

javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel>

playersUpgradesProperty()

get what upgrades the player currently has.

void

purchase(UpgradeTileModel tileClickedOn)

This should attempt to purchase an upgrade tile from the shop.

void

regenerateShopItems()

create new shop items.

Methods inherited from class java.lang.Object

clone[✉], equals[✉], finalize[✉], getClass[✉], hashCode[✉], notify[✉], notifyAll[✉], toString[✉], wait[✉], wait[✉], wait[✉]

Property Details

currentShopItems

public javafx.beans.property.ListProperty<UpgradeTileModel> currentShopItemsProperty

Current items in the shop row that you can buy.

See Also:

[currentShopItemsProperty\(\)](#)

playersUpgrades

public javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> playersUpgradesProperty

get what upgrades the player currently has.

See Also:

[playersUpgradesProperty\(\)](#)

Constructor Details

ShopModel

public ShopModel(Session session)

Constructor

Parameters:

session - game session.

Method Details

currentShopItemsProperty

public javafx.beans.property.ListProperty<UpgradeTileModel> currentShopItemsProperty()

Current items in the shop row that you can buy.

Returns:

shop items.

regenerateShopItems

```
public void regenerateShopItems()
```

create new shop items.

playersUpgradesProperty

```
public javafx.beans.property.ReadOnlyListProperty<UpgradeTileModel> playersUpgradesProperty()
```

get what upgrades the player currently has.

Returns:

returns the list of upgrades.

purchase

```
public void purchase(UpgradeTileModel tileClickedOn)
```

This should attempt to purchase an upgrade tile from the shop. Verifies the player has sufficient funds, deducts the cost, removes the item from the shop, and logs the transaction.

Parameters:

tileClickedOn - the upgrade tile the player is trying to purchase

Throws:

[IllegalArgumentException](#) - if tileClickedOn is empty (null)

See Also:

to check affordability before calling this method,
for the payment mechanism,
for adding to player's collection

canPurchase

```
public boolean canPurchase(UpgradeTileModel tile)
```

Determines whether the player can afford to purchase the specified upgrade tile. Compares the player's current money against the tile's cost.

Parameters:

tile - the upgrade tile the player wants to buy thus check affordability for

Returns:

true if the player has enough money to purchase the tile, false if the player is broke and can't

Throws:

[IllegalArgumentException](#) - if tile is empty

See Also:

for tile pricing

onNextLevelPressed

```
public void onNextLevelPressed()
```

exists shop and increments level requirement for the next level.

Constructor Details

EmptyTileSlotModel

```
public EmptyTileSlotModel()
```

Method Details

getLetterTileSlotProperty

```
public javafx.beans.property.SimpleObjectProperty<LetterTileModel> getLetterTileSlotProperty()
```

Returns:

setTile

```
public void setTile(LetterTileModel tile)
```

Set a new tile.

Parameters:

tile - letter tile.

getFXMLPath

```
public String✉ getFXMLPath()
```

Description copied from class: [TileModel](#)

gets the fxml path.

Specified by:

[getFXMLPath](#) in class [TileModel](#)

Returns:

string path.

Module com.example.project
Package com.example.project.models.tiles

Class LetterTileModel

java.lang.Object
 com.example.project.models.tiles.TileModel
 com.example.project.models.tiles.LetterTileModel

```
public class LetterTileModel  
extends TileModel
```

Represents the letter tiles the player plays holds, redraws.

Constructor Details

LetterTileModel

```
public LetterTileModel(Character2 newLetter)
```

Parameters:

newLetter - letter

Method Details

getLetter

```
public Character2 getLetter()
```

Returns:

returns the tiles character.

getValue

```
public Integer2 getValue()
```

Returns:

base value of scrabble letter score.

getFXMLPath

```
public String2 getFXMLPath()
```

Description copied from class: [TileModel](#)

gets the fxml path.

Specified by:

[getFXMLPath](#) in class [TileModel](#)

Returns:

string path.

Record Class ScrabbleTileProvider.ScrabbleTileData

java.lang.Object²
 java.lang.Record²
 com.example.project.models.tiles.ScrabbleTileProvider.ScrabbleTileData

Record Components:

value - value of scrabble letter

frequency - population of tile

Enclosing class:

ScrabbleTileProvider

```
public static record ScrabbleTileProvider.ScrabbleTileData(int value, int frequency)
extends Record2
```

Constructor Summary

Constructors

Constructor

Description

ScrabbleTileData(int value, int frequency)

Creates an instance of a ScrabbleTileData record class.

Method Summary

All Methods

Instance Methods

Concrete Methods

Modifier and Type

Method

Description

final boolean

equals(Object² o)

Indicates whether some other object is "equal to" this one.

int

frequency()

Returns the value of the frequency record component.

final int

hashCode()

Returns a hash code value for this object.

final String²

toString()

Returns a string representation of this record class.

int

value()

Returns the value of the value record component.

Methods inherited from class java.lang.Object²

clone², finalize², getClass², notify², notifyAll², wait², wait², wait²

Constructor Details

ScrabbleTileData

```
public ScrabbleTileData(int value,  
                      int frequency)
```

Creates an instance of a ScrabbleTileData record class.

Parameters:

value - the value for the `value` record component

frequency - the value for the `frequency` record component

Method Details

toString

```
public final String toString()
```

Returns a string representation of this record class. The representation contains the name of the class, followed by the name and value of each of the record components.

Specified by:

`toString` in class `Record`

Returns:

a string representation of this object

hashCode

```
public final int hashCode()
```

Returns a hash code value for this object. The value is derived from the hash code of each of the record components.

Specified by:

`hashCode` in class `Record`

Returns:

a hash code value for this object

equals

```
public final boolean equals(Object o)
```

Indicates whether some other object is "equal to" this one. The objects are equal if the other object is of the same class and if all the record components are equal. All components in this record class are compared with '=='.

Specified by:

`equals` in class `Record`

Parameters:

o - the object with which to compare

Returns:

true if this object is the same as the o argument; false otherwise.

value

```
public int value()
```

Returns the value of the `value` record component.

Returns:

the value of the `value` record component

frequency

```
public int frequency()
```

Returns the value of the `frequency` record component.

Returns:

the value of the `frequency` record component

Module com.example.project
Package com.example.project.models.tiles

Class ScrabbleTileProvider

java.lang.Object
com.example.project.models.tiles.ScrabbleTileProvider

```
public class ScrabbleTileProvider  
extends Object
```

Static class to store the scrabble base letter value.

Constructor Details

ScrabbleTileProvider

```
public ScrabbleTileProvider()
```

Constructor.

Method Details

seedRandomNumberGenerator

```
protected static void seedRandomNumberGenerator(long newSeed)
```

getValue

```
public int getValue(Character letter)
```

Returns Integer of the letter according to scrabble

Parameters:

letter - letter to get value of

Returns:

Integer value of the letter, or 0 if not found

drawRandomTile

```
public Character drawRandomTile()
```

Returns:

randomly selected tile based on CDF

Module com.example.project

Class UpgradeEffects

java.lang.Object
 com.example.project.models.tiles.UpgradeEffects

```
public class UpgradeEffects  
extends Object
```

upgrade effect methods

Constructor Summary

Constructors

Constructor

Description

`UpgradeEffects()`

Method Summary

All Methods

Static Methods

Concrete Methods

Modifier and Type

Method

Description

static void

`braceletEffect()`

Add +1 to score multiplier for every consecutive letter alphabetical order.

static void

`buttonEffect()`

adds 5 to the word score for every x in the tile rack.

static void

`coinEffect()`

20% Chance the total word score is doubled

static void

`diceEffect()`

Value is doubled for a random letter in the played word

static void

`glassesEffect()`

Adds +2 to the score multiplier for every identical pair of letters next to each other

static void

`mirrorEffect()`

If played word is a palindrome, doubles word score.

Methods inherited from class java.lang.Object

`clone()`, `equals()`, `finalize()`, `getClass()`, `hashCode()`, `notify()`, `notifyAll()`, `toString()`, `wait()`, `wait()`, `wait()`

Constructor Details

UpgradeEffects

```
public UpgradeEffects()
```

Method Details

glassesEffect

```
public static void glassesEffect()
```

Adds +2 to the score multiplier for every identical pair of letters next to each other

diceEffect

```
public static void diceEffect()
```

Value is doubled for a random letter in the played word

coinEffect

```
public static void coinEffect()
```

20% Chance the total word score is doubled

mirrorEffect

```
public static void mirrorEffect()
```

If played word is a palindrome, doubles word score.

braceletEffect

```
public static void braceletEffect()
```

Add +1 to score multiplier for every consecutive letter alphabetical order.

buttonEffect

```
public static void buttonEffect()
```

adds 5 to the word score for every x in the tile rack.

Constructor Details

UpgradeBuilder

```
public UpgradeBuilder()
```

Method Details

description

```
public UpgradeTileModel.UpgradeBuilder description(String2 description)
```

upgrade description builder

Parameters:

description - new upgrade description

Returns:

description

name

```
public UpgradeTileModel.UpgradeBuilder name(String2 name)
```

upgrade name builder

Parameters:

name - new upgrade name

Returns:

name

imagePath

```
public UpgradeTileModel.UpgradeBuilder imagePath(String2 imagePath)
```

upgrade image path builder

Parameters:

imagePath - new upgrade image path

Returns:

image path

cost

```
public UpgradeTileModel.UpgradeBuilder cost(double cost)
```

upgrade cost builder

Parameters:

cost - new upgrade cost

Returns:

cost

upgradeEffect

```
public UpgradeTileModel.UpgradeBuilder upgradeEffect(Runnable2 upgradeEffect)
```

upgrade effect builder

Parameters:

upgradeEffect - new upgrade effect

Returns:

upgrade effect

build

```
public UpgradeTileModel build()
```

build upgrade

Returns:

new upgrade
